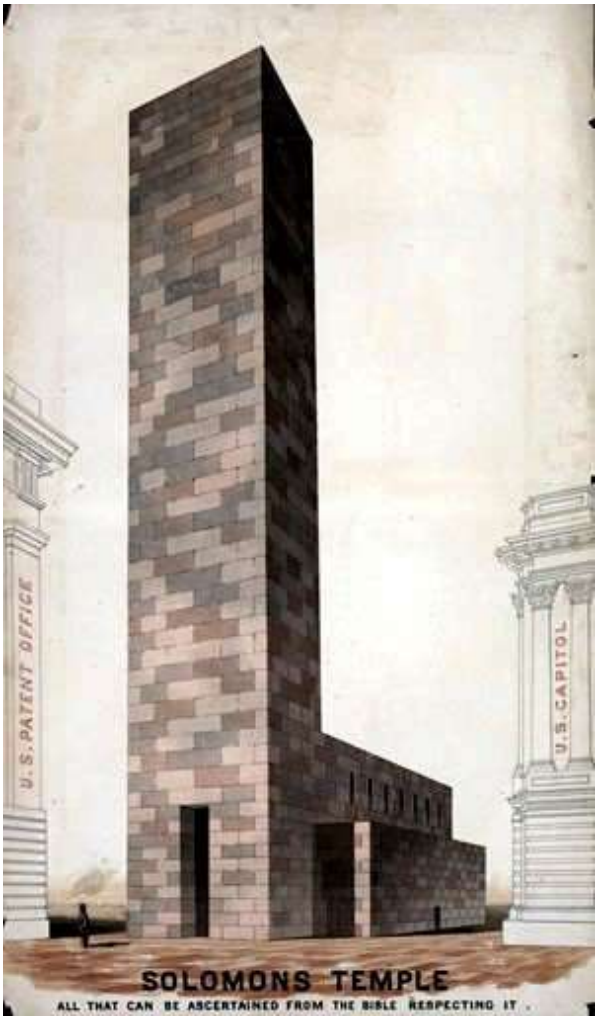
SOLOMON'S TEMPLE



Solomon's Temple - Perspective (Thomas Ustick Walter, Thomas Ustick Walter Collection, Athenaeum of Philadelphia).

THE GREAT PYRAMID – THE KEY OF SOLOMON'S TEMPLE

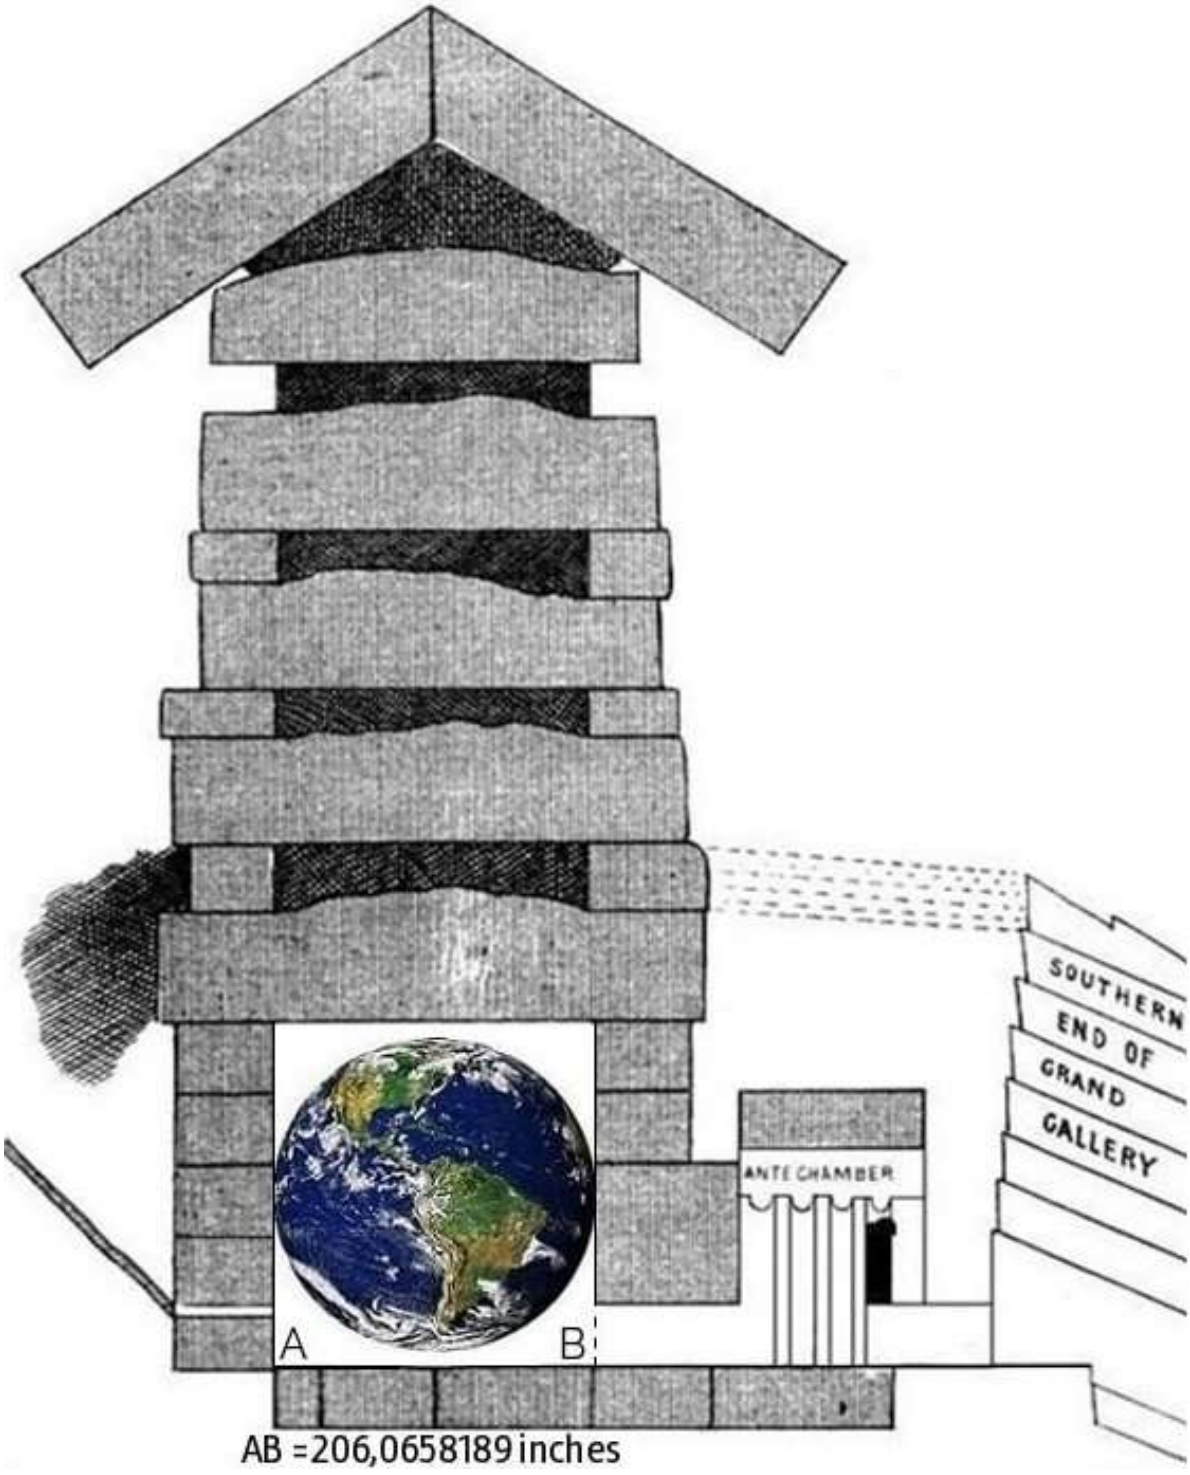


Figure 1. *King's Chamber.*

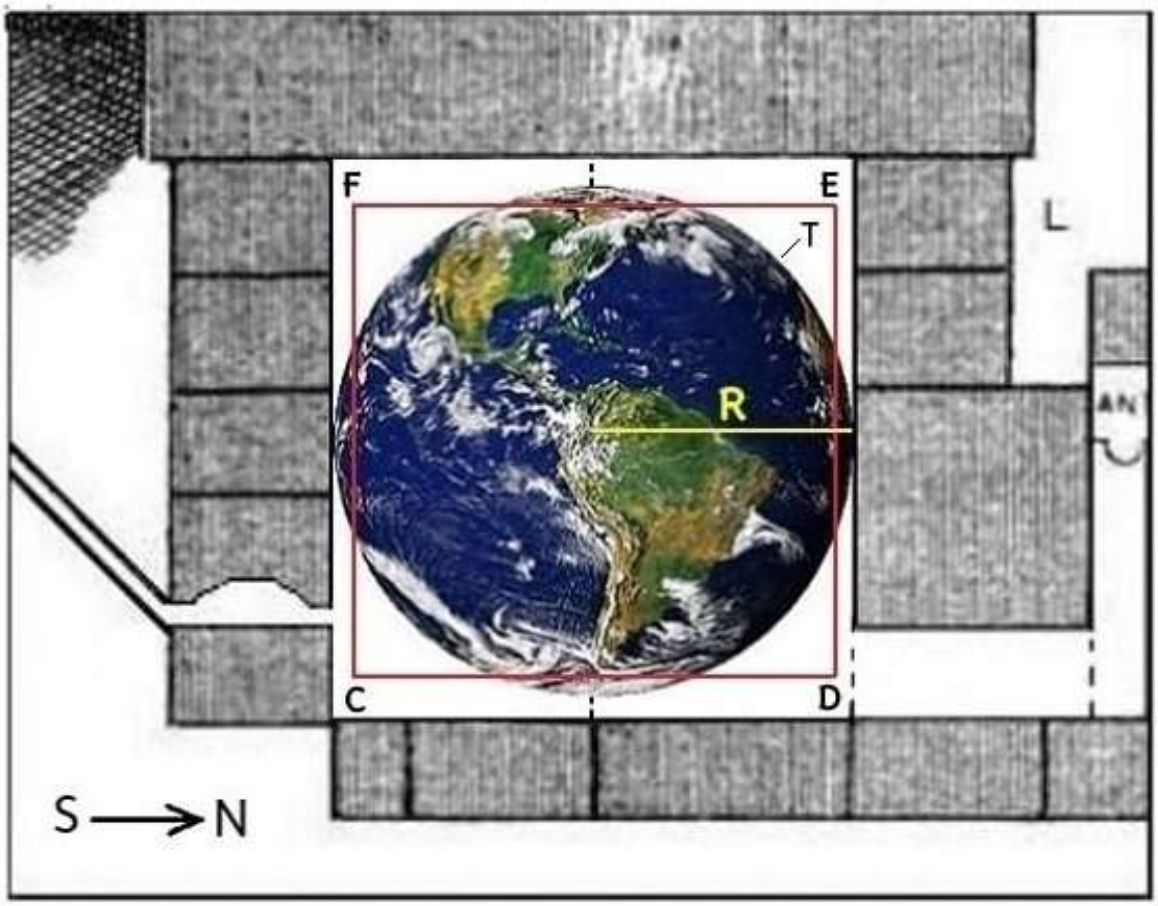

Figure 2. *The width of the King's chamber.*

Solomon's Temple (measurements in sacred cubits "cubit of the old standard" (*2 Chronicles 3:3, The New King James Version*):

• Portal (high) ……**120** sacred cubits (SC)

• Length …….. **60** SC

• Height ……... **30** SC

• Width ……. **20** SC

Half the width of the King's Chamber in the Great Pyramid and the granite floor length in the Antechamber: **103.0329095 inches** = **AB/2** (*Figure 1, 3*).

The numbers of the Temple are the Code:

a) 103.0329095 x **120** = 12,363.94913 inches,

b) 12,363.94913 x **60** = 741,836.948 inches,

c) 741,836.948 x **30** = 22,255,108.44 inches,

d) 22,255,108.44 x **20** = 445,102,168.8 inches = 11,305.59509 km = **CD**.

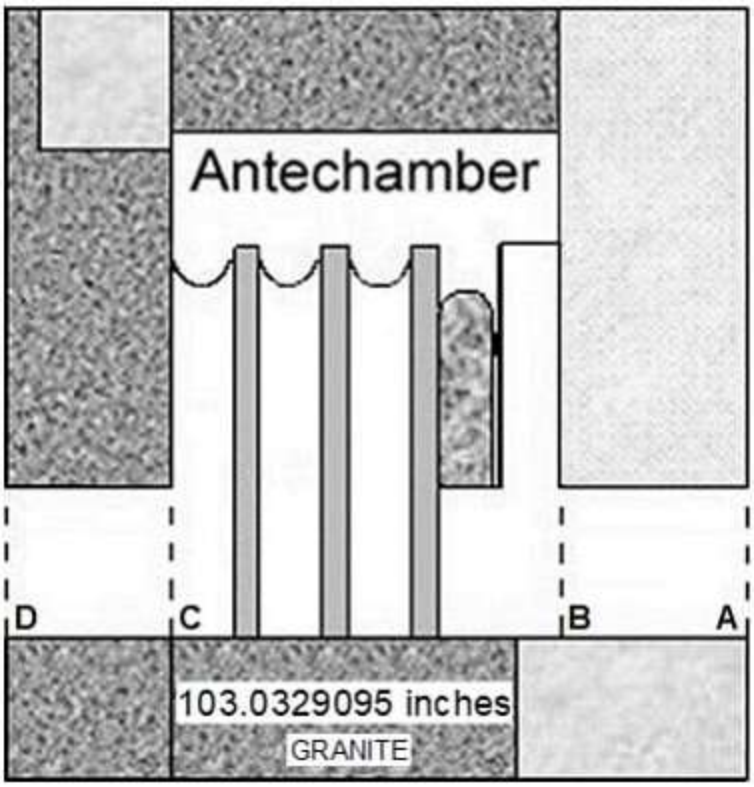

Figure 3. The Antechamber: the length of granite floor is 103.0329095 inches.

Surface area of the Square **CDEFA** = 127,816,480.3 km² = surface area of the Circle **T**. Radius of the Circle (**R**) = **6378.501679 km** = **R** = **Earth's equatorial radius**.

The height of the Great Pyramid = 5813.011886 inches:

(5813.011886 : 100) x 120 x 60 x 30 x 20 = 251,122,113.5 inches = **6378.501682 km** = **R** = **equatorial radius of the Earth**.

Length of the Antechamber = 116.2602377 inches = 2 x 58.13011886

116.2602377 x 120 x 60 x 30 x 20 = 50,2244,226.9 inches = 1**2,757.00336 km** = **equatorial diameter of the Earth**.

116.2602377 x 3.14159 = 365.242 inches:

365.242 x 120 x 60 x 30 x 20 = 1,577,845,440 inches = **40,077.27418 km** = l**ength of the Earth's equator**.

One side of the Pyramid is 231.92867 meters long, and the sum of the lengths of the four sides is 927.71468 meters:

927.71468 cm x 120 x 60 x 30 x 20 = 40,077.27418 km = **length of the Earth's equator.**

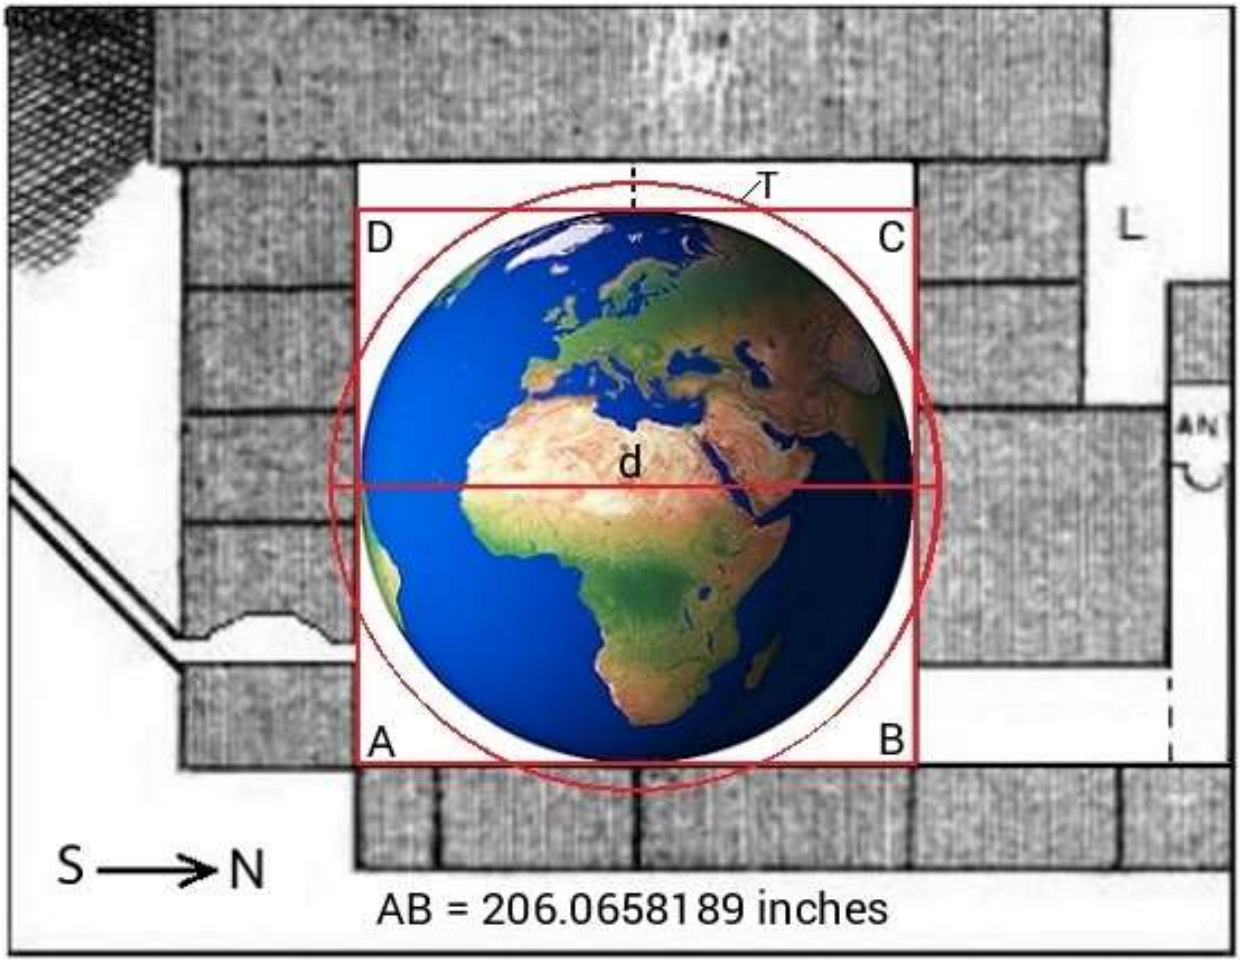

Figure 4. *Geometry of the King's Chamber.*

• **AB** = 206.0658189 inches, surface area of the Square **ABCDA** = 42,463.12172 squared inches = surface area of the Circle **T**.

• Radius of the Circle **T** = 116.2602376 inches = length of the Antechamber = 50^{th} part of the Pyramid height.

• Diameter of the Circle **T** (**d**) = 232.5204754 inches = 25^{th} part of the Pyramid height.

• The circumference of the Circle **T** = 730.4840003 inches = 1855.429361 cm = 100^{th} part of 1 minute of latitude on the Earth's equator:

(1855.429361 cm x 100) x 60 minutes x 360 degrees = 40,077.27418 km.

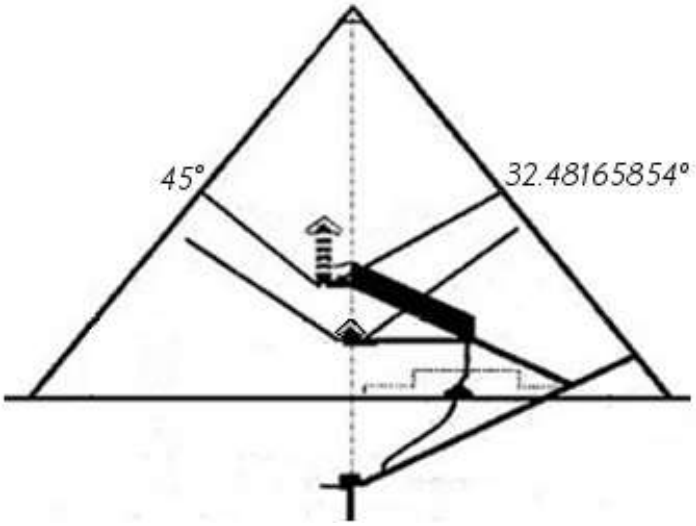

Figure 5. *The angles of ascent of the "ventilation" channels from the King's Chamber.*

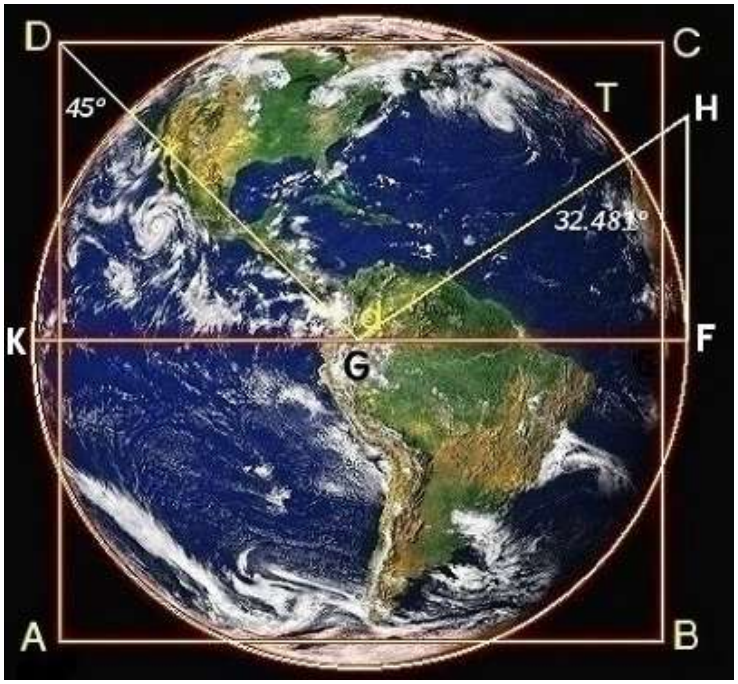

Figure. 6. *Earth and channels of the King's Chamber.*

• **GF - GH** = 32.48165854°

• Tangent 32.48165854° = 0.63662031 = 1/2 of the tangent of the ascent angle of the Pyramid (tangent 51,85399754° = 1.273240621).

• **GF** = equatorial radius of the Earth = 6378.50168 km.

• **FH** = 4060.683717 km:

4060.683717 x 3.14159 = 12,757.00336 km = **FK** = equatorial diameter of the Earth.

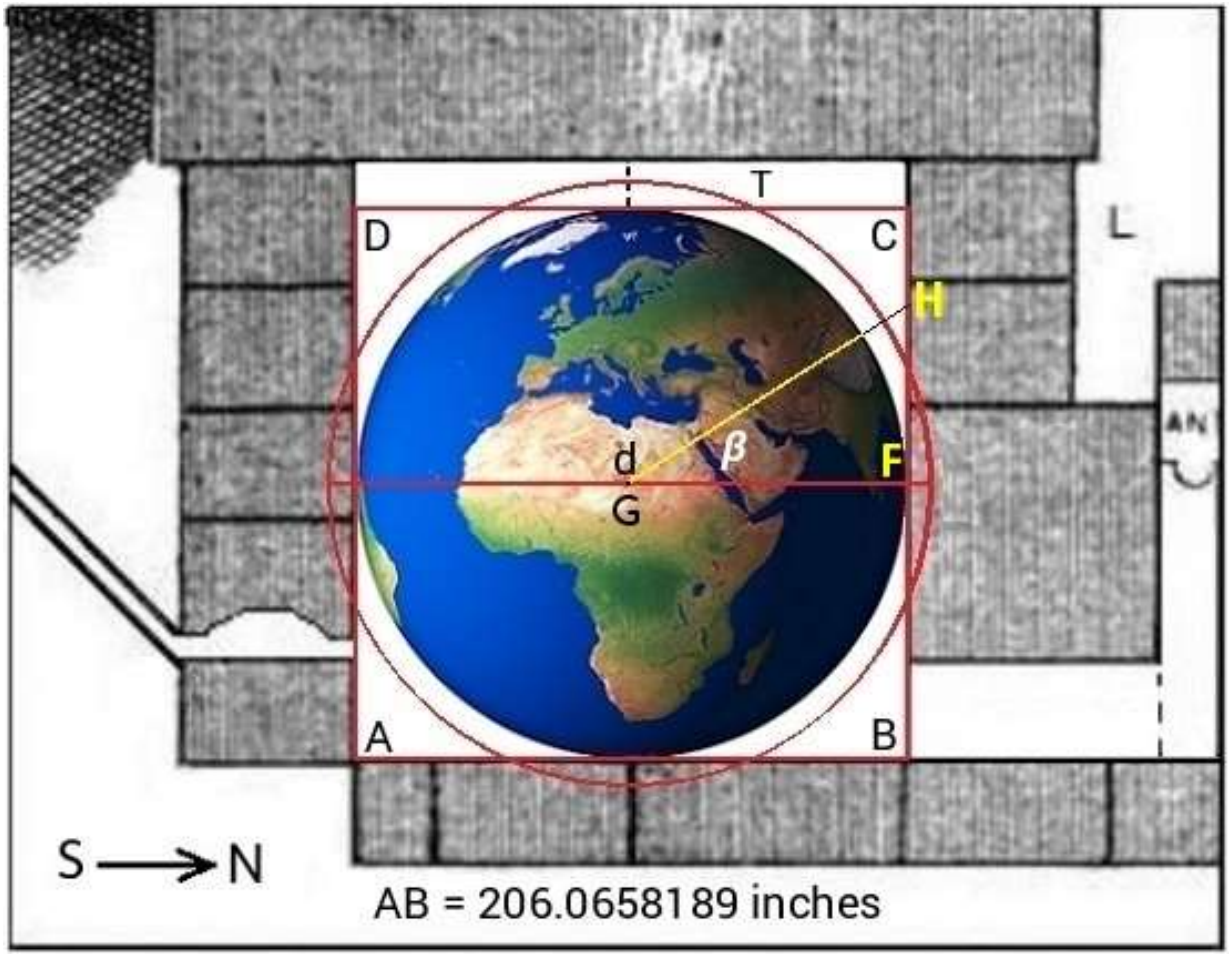

Figure 7. *North channel of the King's Chamber (β).*

- **AB** = 206.0658189 inches,
- **GF** = 103.0329095 inches,
- **β** = 32.48165854° = North channel of the King's Chamber,
- Tangent 32.48165854° = 0.63662031
- **FH** = 65.59284275 inches:

65.59284275 x 3.14159 = 206.0658189 inches = **AB**

(65.59284275 x 2) x 3.14159 = 412.1316378 = the length of the King's Chamber = 2 x 206.0658189 inches.

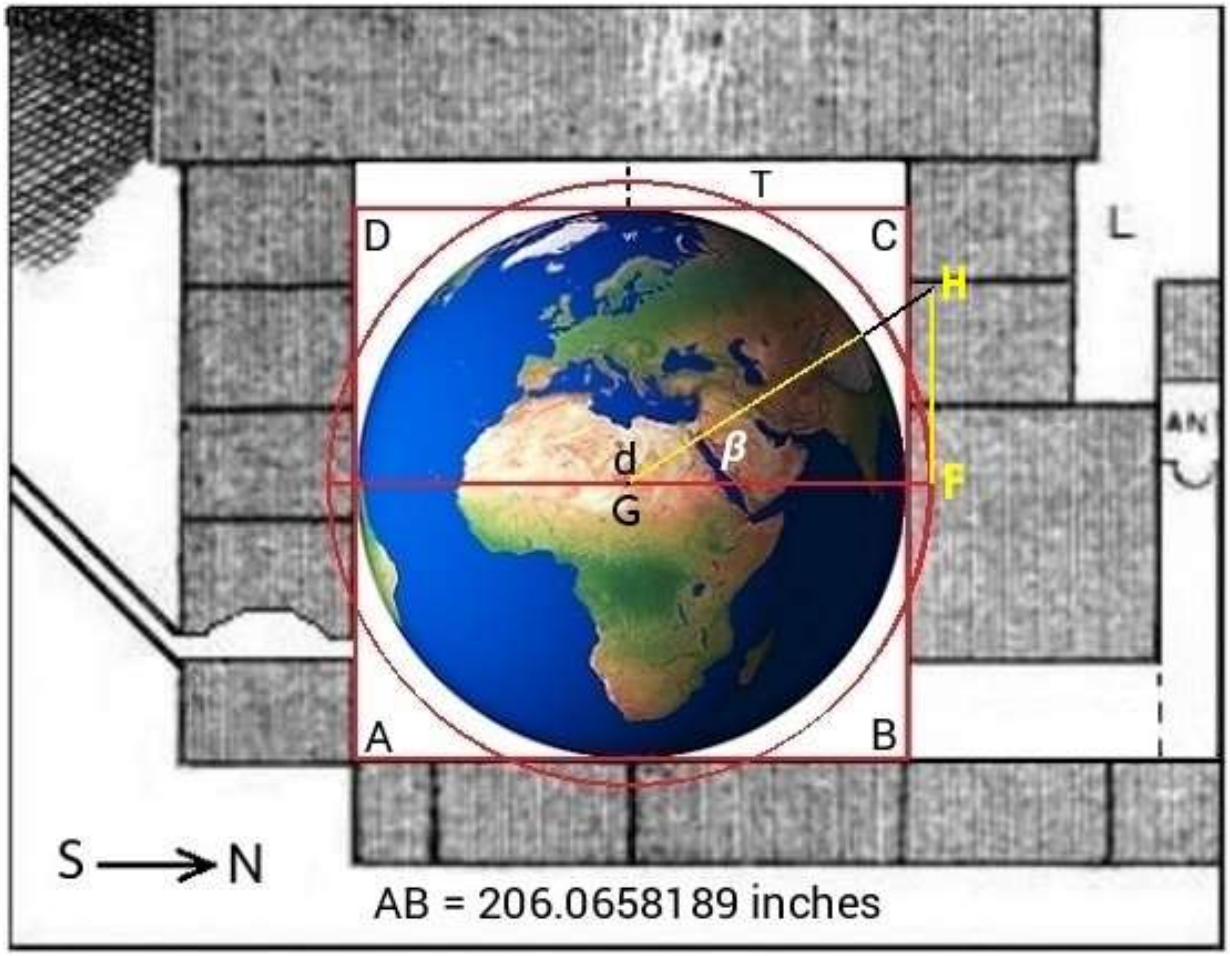

Figure 8. *Geometry of the North channel (β).*

- **AB** = 206.0658189 inches,
- **GF** = 116.2602377 inches
- **β** = 32.48165854° = North channel of the King's Chamber,
- Tangent 32.48165854° = 0.63662031,
- Sine 32.48165854° = 0.537029595,
- **FH** = 74.01362857 inches,
- **GH** = 137.8203906 inches.

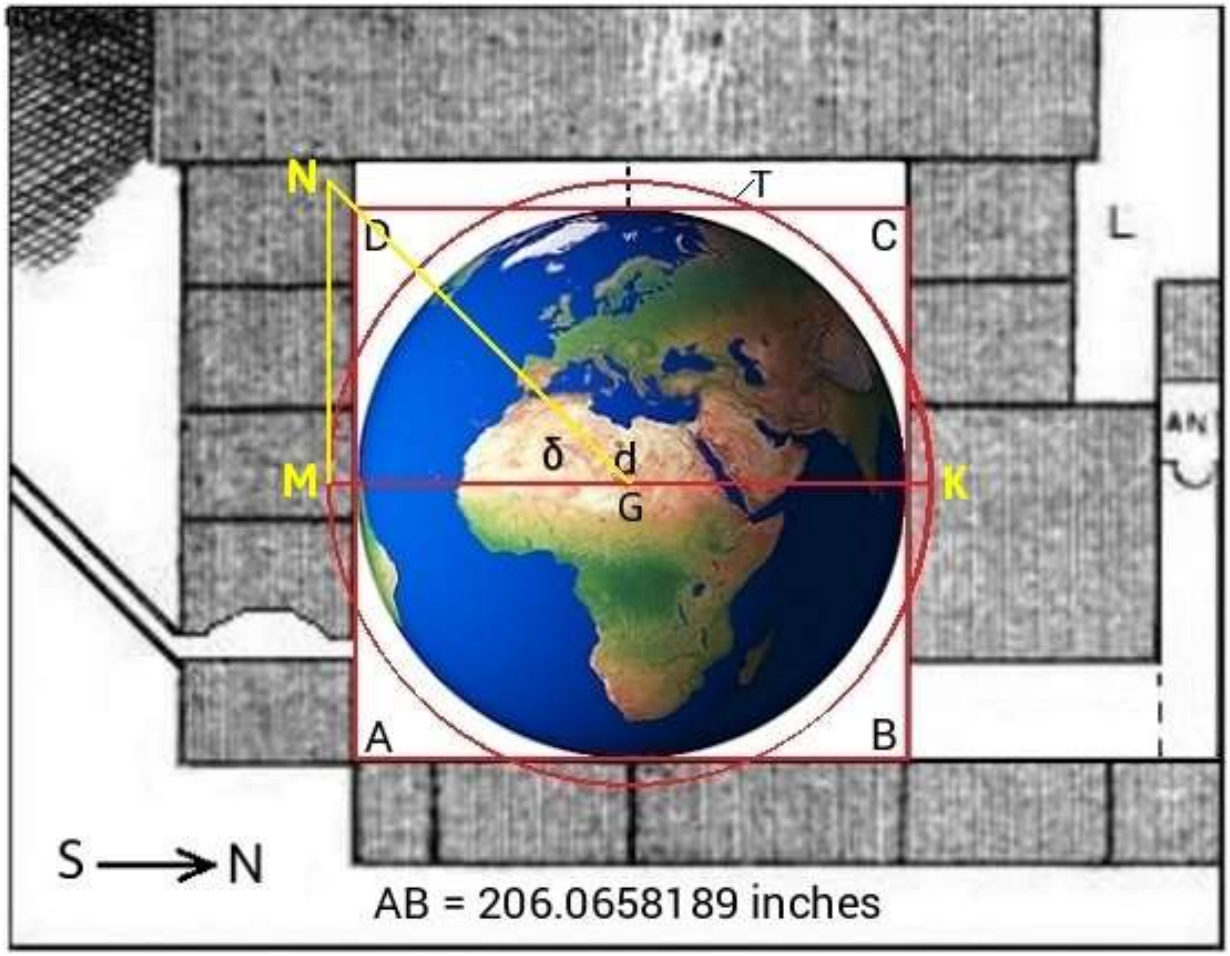

Figure 9. *Geometry of the South channel (δ).*

- **AB** = 206.0658189 inches,
- **MK** = 232.5204754 inches,
- **GM** = 116.2602377 inches,
- **δ** = 45°
- Sine 45°= 0.707106781
- **MN** = 116.2602377 inches,
- **GN** = 164.4168049 inches.

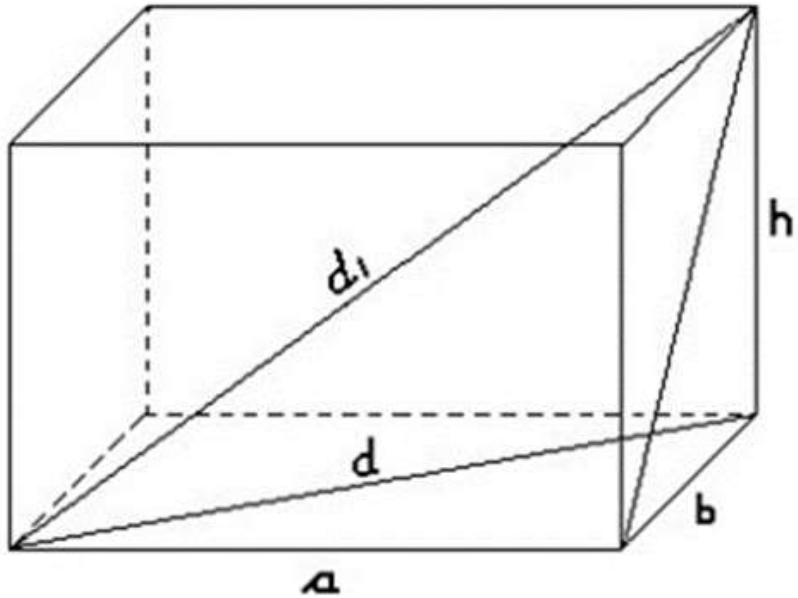

Figure 10. *Geometry of the King's Chamber.*

• Length (**a**) = 412.1316378 inches,
• Width (**b**) = 206.0658189 inches,
• Height (**h**) = 230.3885895 = 206.0658189 x √1.25 =
= 206.0658189 x 1.118033989,
• Floor diagonal (**d**) = 460.7771789 = 412.1316378 x √1.25 =
= 412.1316378 x 1.118033989,
• Cubical diagonal (**d1**) = 515.1645473 = 412.1316378 x 1.25,
• **GN** = 164.4168049 inches (*Figure 9*):

√2 = 1.414213562

164.4168049 x 1.414213562 = 232.5204754 inches = **MK** (*Figure 9*).

The height of the Great Pyramid = 5813.011886 inches = 232.5204754 sacred cubits. Time can be shown in the measurements of length. The Bible and the Great Pyramid lead us to these measurements: **1 sacred cubits** = **20.19176875 years**:

232.5204754 x 20.19176875 = 4694.99967 years.

4694.99967 : 25 = 187.7999868 years = 68,592.4477 days. Counting on one of the Pyramid code 1 day = 2.466586509 cm: 68,592.4477 x 2.466586509 = 169,189.194 cm = 66,609.91888 inches:

66,609.91888 : 232.5204754 = **286.4690465 inches**: the axis of the entrance of the Great Pyramid (**E,** Figure 11) is distanced away from the main axis of the Pyramid (**PA**) by 286.4690182 inches = the roof-height od the Grand Gallery above Ascending Passage roof-line.

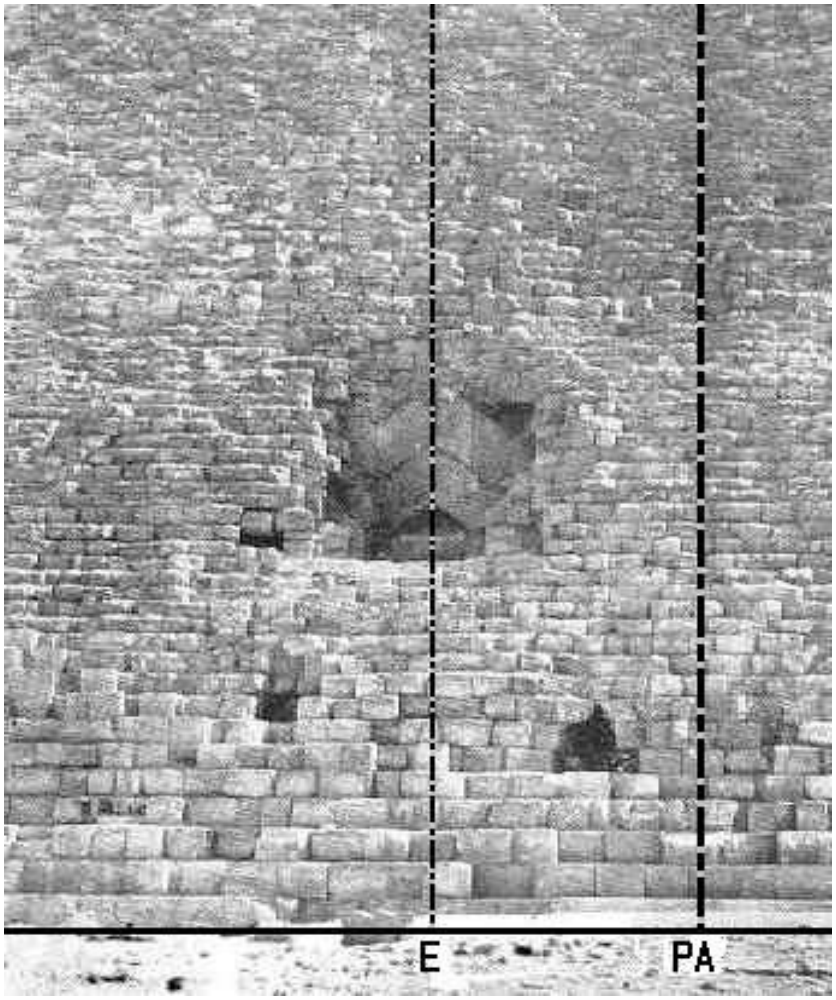

Figure 11. *Entrance axis (**E**) - Pyramid's axis (**PA**): 286.4690182 inches.*

The height of the Great Pyramid shows the time from the Biblical Flood 7374.882 years from the creation of the world:

7374.882 + **4695** = **12,069.882** years from the creation of the world to the time of the fiery transformation of this world. It is the year **2070 AD** (*Figure 39*).

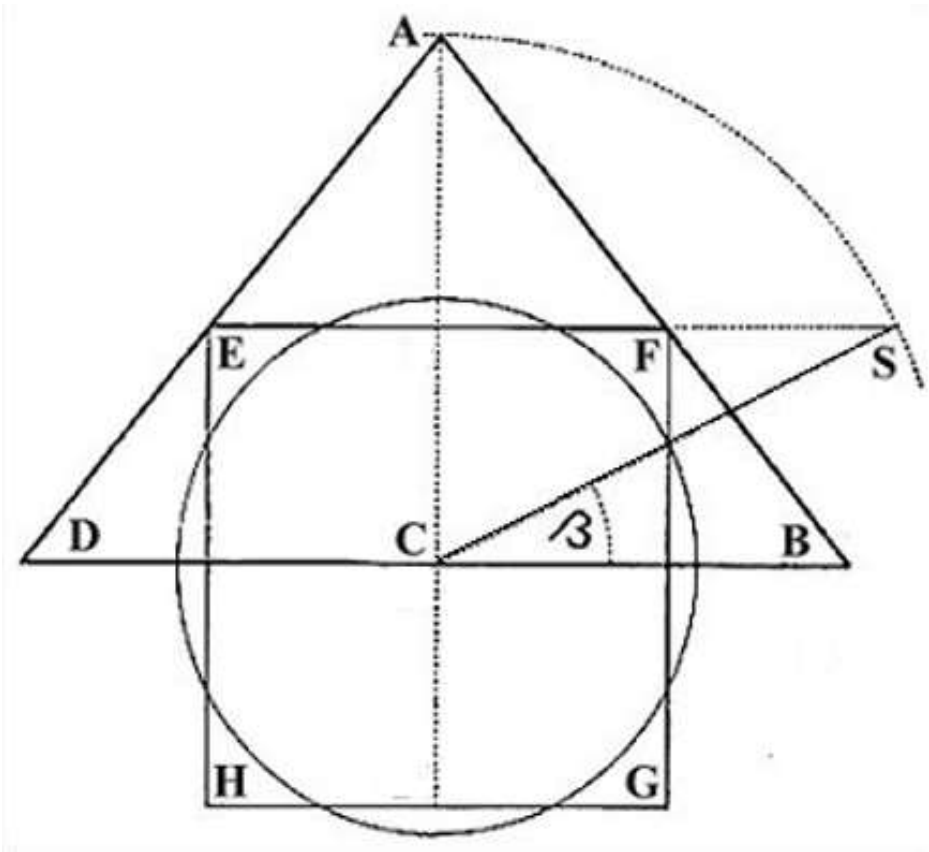

Figure 12.

- **CBS** (**β**) = 26.30268975°,
- Tangent 26.30268975° = 0.494289196,
- Sine 26.30268975° = 0.443113275.
- **DB** = 365.242 sacred cubits = 9131.05 inches = 231.92867 m,
- **CA** = 232.5204754 sacred cubits = 5813.011885 inches = 147.6505019 m,
- **HG** = 206.0658187 sacred cubits = 5151.645468 inches = 130.8517949 m.
- Length of the King's Chamber = 412.1316378 inches:

  5151.645468 : 412.1316378 = **12.5**
- Width of the King's Chamber = 206.0658189 inches:

  5151.645468 : 206.0658189 = **25**

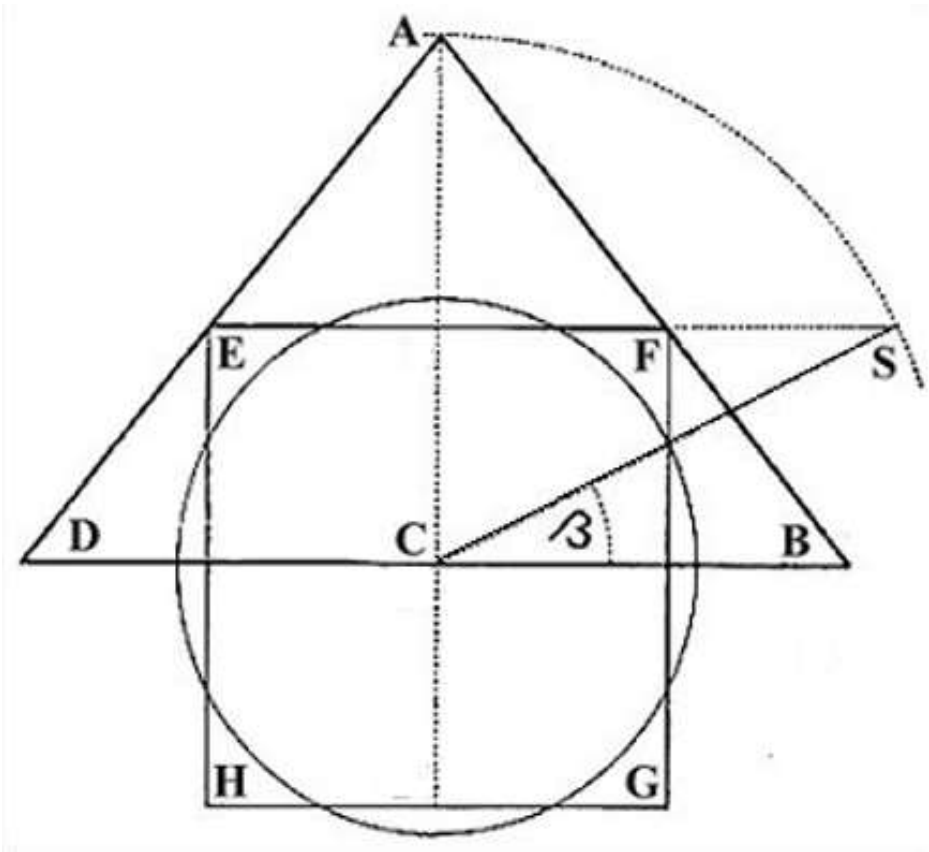

Figure 13.

• The Great Pyramid Code: **2.466586509 cm** = **1 day**:

147.6505019 m = 14,765.05019 cm:

14,765.05019 : 2.466586509 = 5986.025682 days = **CA**,

• Angle **DCA** = **CBA** = angle of the Pyramid ascent = 51.85399754º,

• Tangent 51.85399754º = 1.273240621,

• 1.273240621 inches = 3.234031177 cm:

3.234031177 : 2.466586509 = 1.311136328 days,

CA = 5986.025682 days:

5986.025682 : 1.311136328 = 4565.524999 days = **12.5 years** = **CB** = **CD**,

• **DB** = **25 years**:

4 x 25 = 100 years = **1 century**.

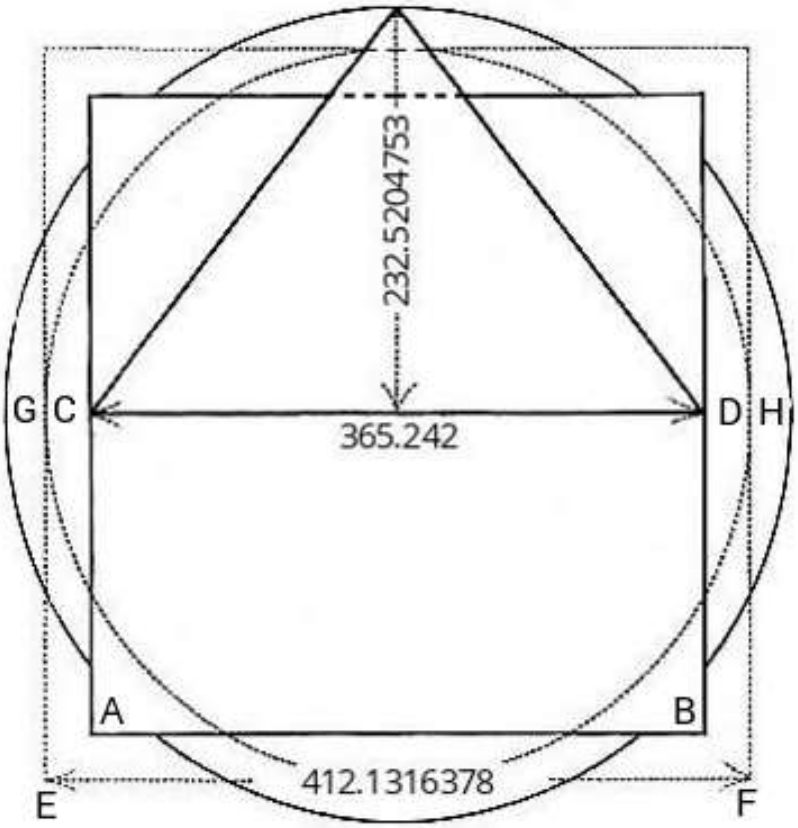

Figure 14.

• **AB** = 365.242 sacred cubits = 9131.05 inches = 213.92867 meters = original base-side socket-length of the Pyramid;

• **EF** = 412.1316378 sacred cubits = 10,303.29095 inches = 261.70359 meters = **GH** (diameter of the small circle);

• the width of the King's Chamber = 206.0658189 inches:

36,524.2 : 206.0658189 = 177.2453102 = √31415.9 = **10.000 Pi**

• **1 year** = **365.242 days**:

a) 365.242 : 206.0658189 = 1.772453102 = √3.14159 = **Pi**

b) 206.0658189 : 1.772453102 = 116.2602377

c) 116.2602377 x 3.14159 = 365.242 = **1 year**

• **1 year** = 365.242 days = circumference od the Circle **T** (*Figure 15, p. 18*),

• **d** = 116.2602377 days,

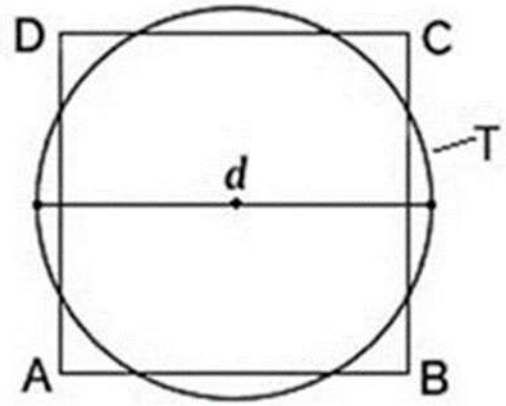

Figure 15. *Geometry of 1 year.*

• area of the circle **T** = 10,615.78044 squared units (days) = area of the Square **ABCDA**,

AB = 103.0329095 days

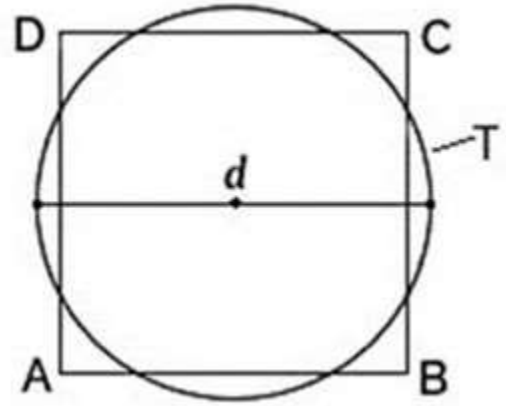

Figure 16*. Geometry of the number Pi.*

• The number **Pi** = 3.14159… days = circumference of the Circle **T** (*Figure 16*),

• **d** = 1 unit (day),

• area of the circle **T** = 0.7853975 squared units = area of the Square **ABCDA**,

• **AB** = 0.886226551 units (days)

• **Figure 15**: **AB** = 103.0329095 days

• **Figure 16**: **AB** = 0.886226551 days:

a) 103.0329095 x 0.886226551 = 91.3105 days = 1 season,

b) 103.0329095 : 0.886226551 = 116.2602377 days = **d** (*Figure 15, p. 18*),

c) 116.2602377 x 3.14159 = 365.242 days = 1 year

• **1 year** = 365.242 days:

365.242 : 103.0329095 = 3.544906206 = 0.886226551 x 4 = **ABCDA** (*Figure 16, p. 18*),

• 24 hours = 1 day:

1 : 0.886226551 = 1.128379644 days,

$1.128379644^2 = 1.273240621$ = tangent β (*Figure 17*),

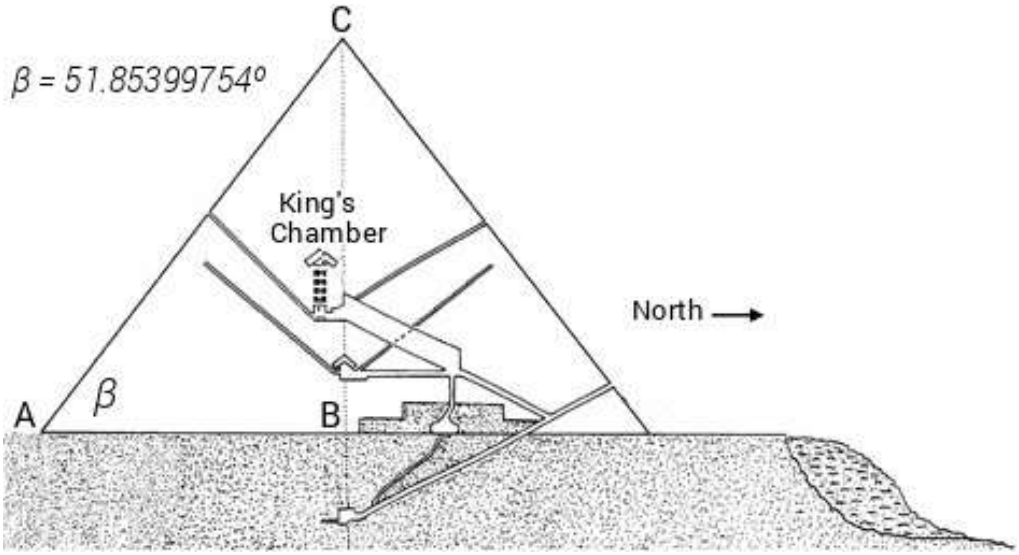

Figure 17.

• **AB** = 4565.525 inches

• tangent β = 1.273240621

4565.525 x 1.273240621 = 5813.011885 inches = **BC**

Inversion (lat. *inversio* - *turning*, *twisting*) of one word, several words, a word or a sentence is done for a different, sometimes opposite meaning, sometimes for a stronger emphasis. Here we will perform a geometric inversion of the Great Pyramid, i.e. we will check the measurements of the Pyramid in its reflection in the water of the Nile (*Figure 18, p. 20*).

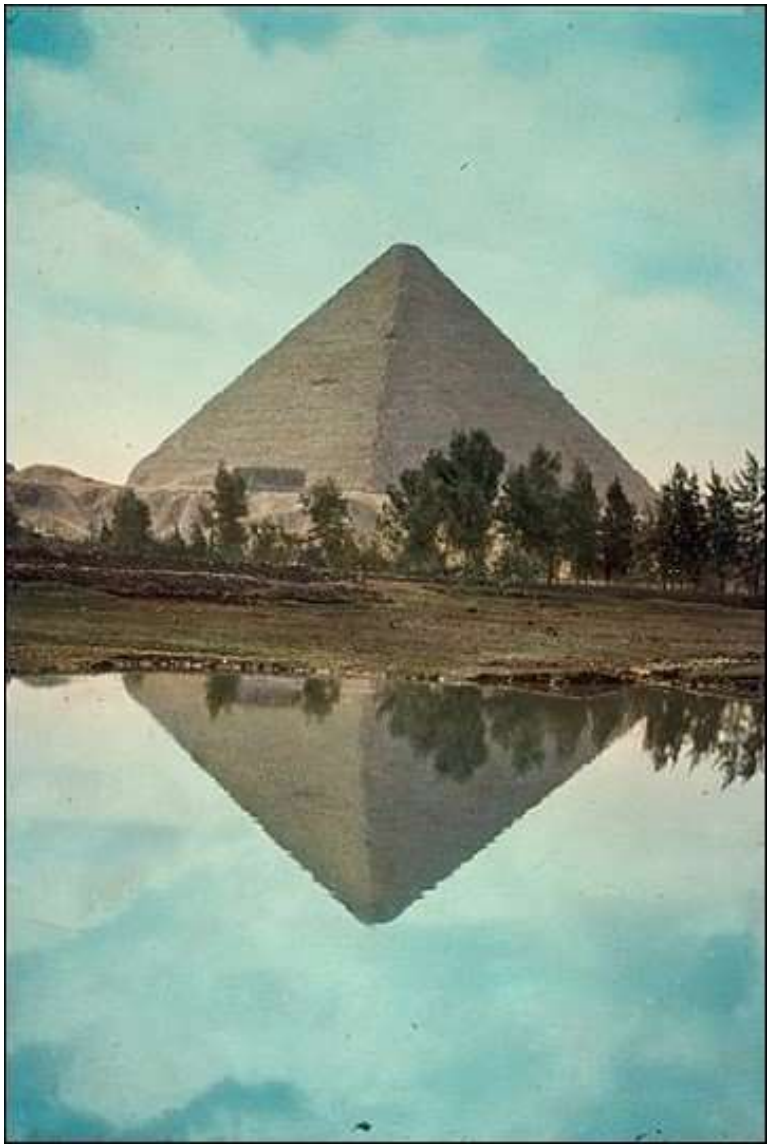

Figure 18. *Inversion of the Pyramid.*

• **β** = angle of the Pyramid Entrance passage = 26.30268975º (*Figure 19, p. 21*),

• tan β = 0.494289196

• sinus β = 0.443113275

• **AC** = equatorial radius of the Earth: 6378.50168 km,

• **BC** = 2826.398775 km,

• **AB** = 5718.107532 km = the time from the beginning of Creation to the year of redesigning Adam's DNA = 4282 BC.

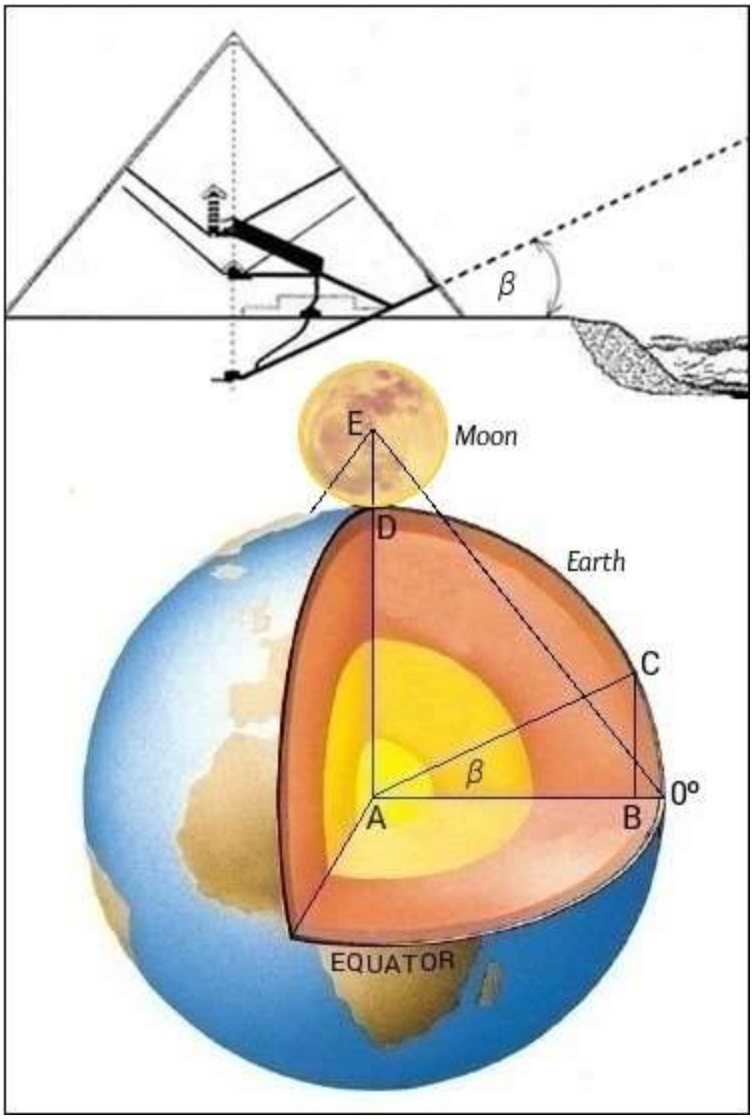

Figure 19. *Geometry of the Earth's cross-section.*

• **DE** = 1742.86576 km = radius of the Moon.

By changing the original divine human DNA 5718 years since the beginning of the creation of our world, some Aliens have changed and disrupted the original DNA created for man by God the Creator. Why did the Aliens do this? The original pre-Adamic people knew no evil, they were not greedy, they were not selfish, they were not interested in mining, they were not interested in gold. The aliens needed gold on their planet, and it was not necessary for their technological development, so they changed the DNA of the original man, thus creating Adam, the gold-loving and morally depraved man we know today.

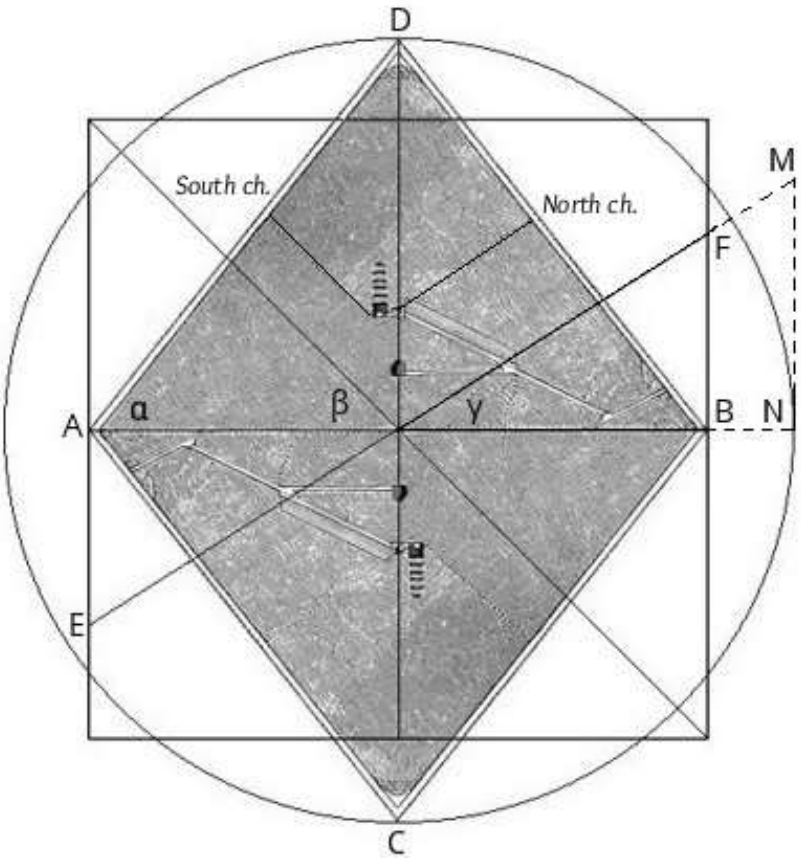

Figure 20. *Geometry of the Pyramid's inversion.*

- **AB** = 231.92867 m = length of the Pyramid's base,
- **α** = 51.85399754º
- **tan α** = 1.273240621
- **CD** = 295.3010038 m = two Pyramid's heights,
- **β** = 45º = angle of the Southern channel of the King's Chamber,
- **γ** = 32.48165854º = angle of the Northern channel of the King's Chamber,
- **tan γ** = 0.63662031 = ½1,273240621 = tan **α**,
- **AE** = **BF** = 73.8252509 m = ½ of the Pyramid's height,
- circumference of the Circle = 927.7146805 m = 4**AB** = perimeter of the Square of the Pyramid's base,
- **NM** = 93.99730829 m

93.99730829 x 3.14159 = 295,3010038 m = **CD**.

THE GREAT PYRAMID – GEOMETRIC MODEL OF THE EARTH

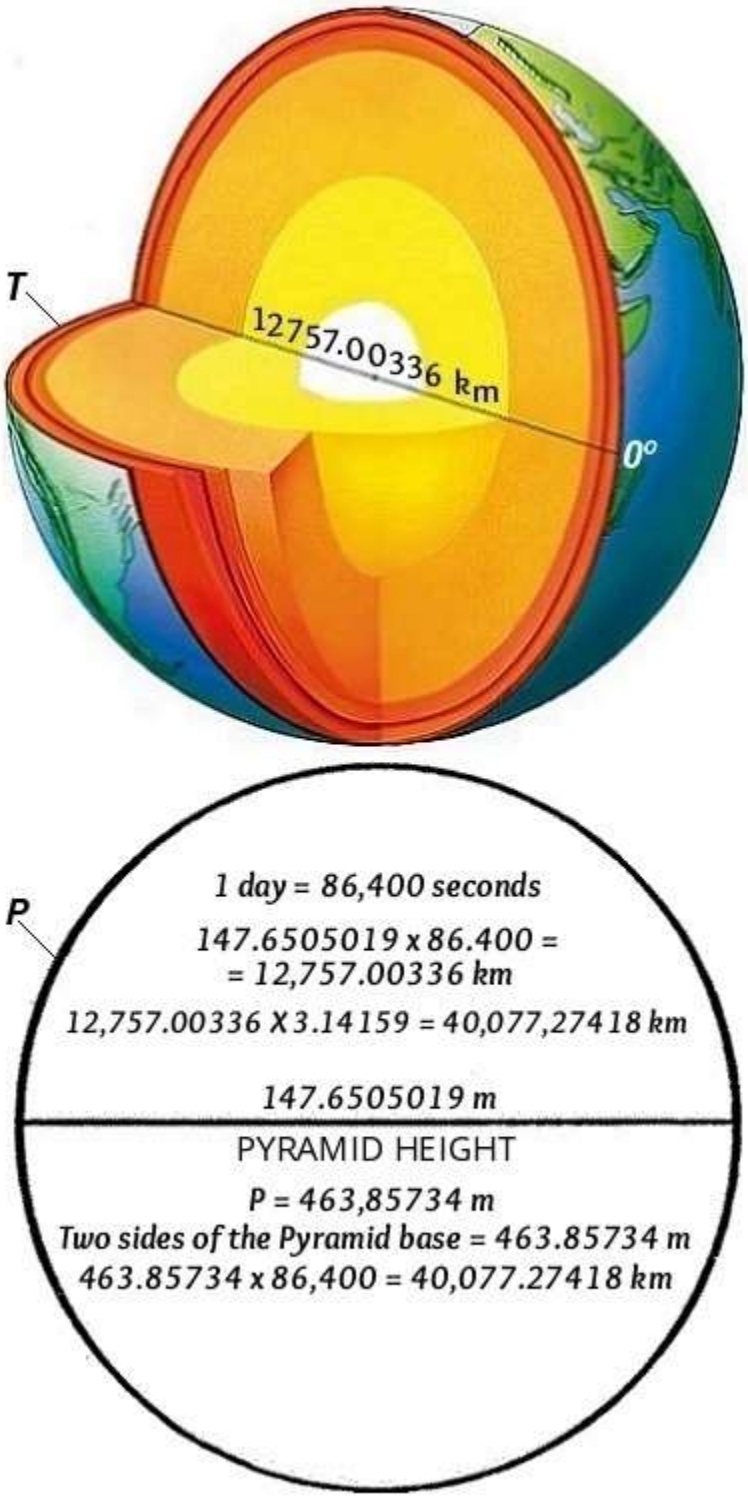

***Figure 21**. The Great Pyramid is a geometric model of the Earth.*

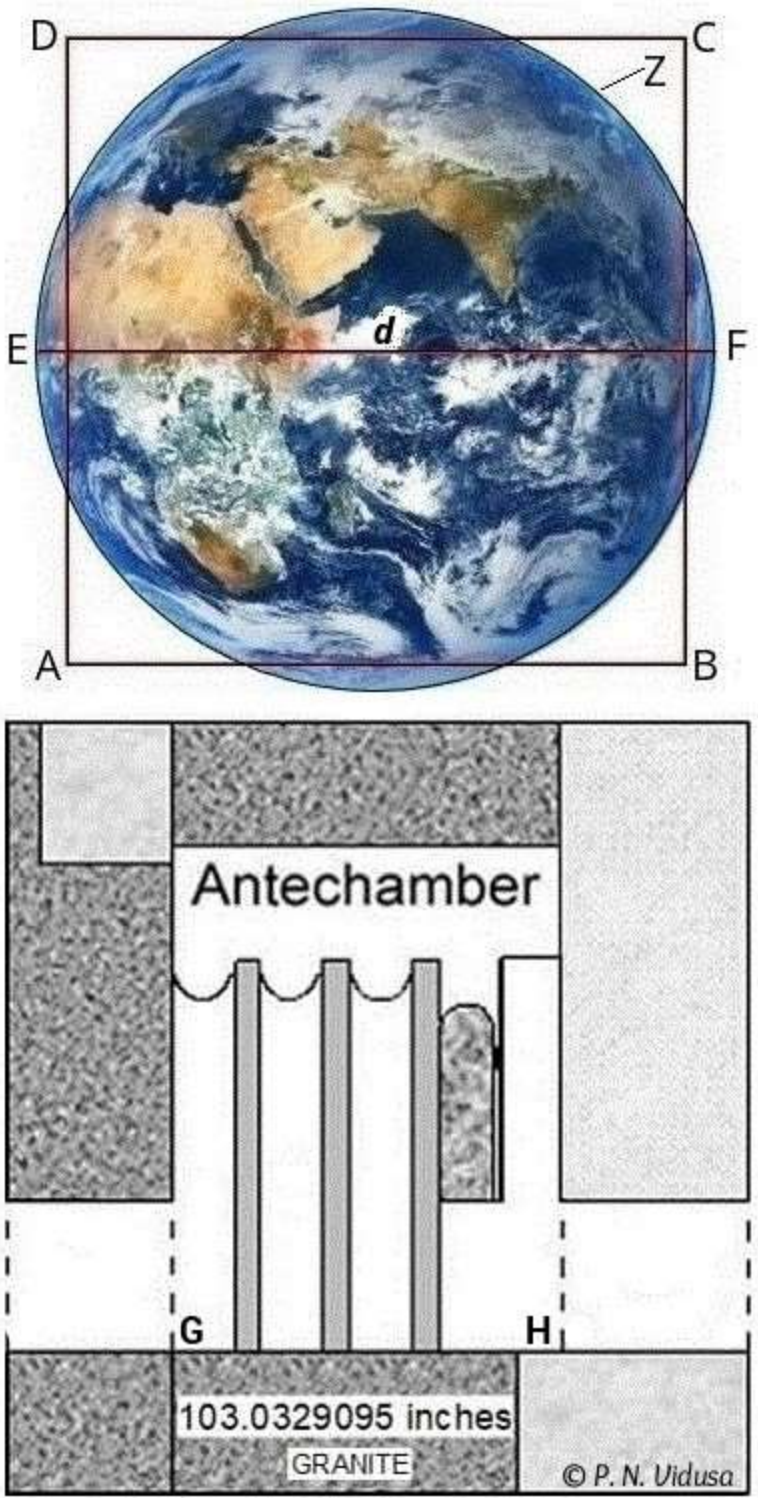

Figure 22. Antechamber: **GH** = 116.2602377 inches:
116.2602377 x 120 x 60 x 30 x 20 = 502,244,226.9 inches =
= 12,757.00336 km = **EF** = **d**.
Granite: 103.0329095 x 120 x 60 x 30 x 20 = 445,102,168.8 inches =
= 11,305.59509 km = **AB**.

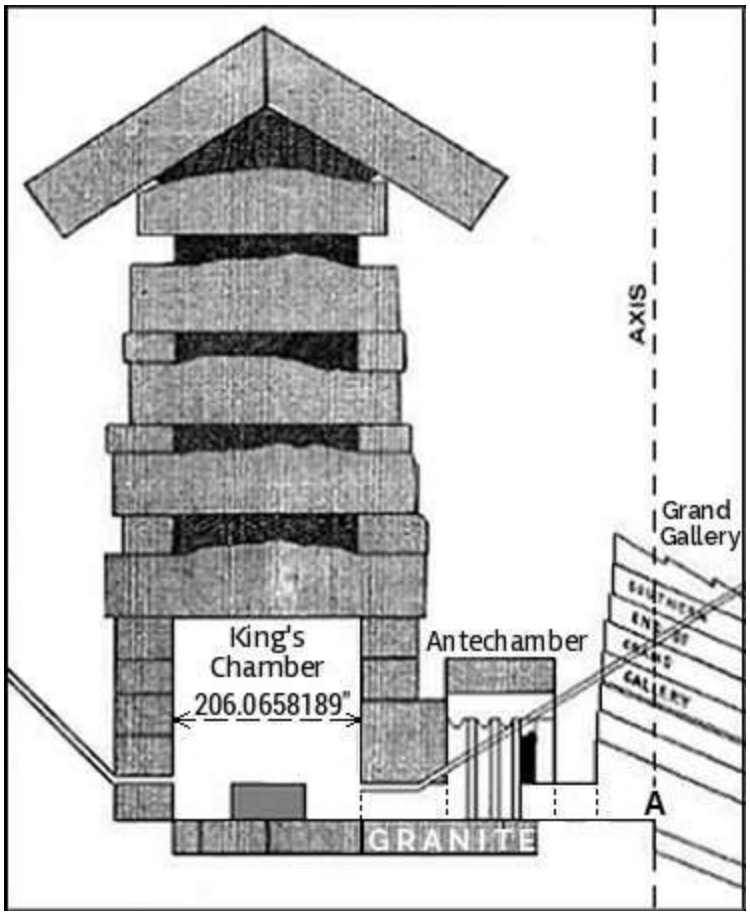

Figure 23. *King's Chamber.*

Width of the King's Chamber = 206.0658189 inches = 523.40718 cm:

523.40718 x 120 x 60 x 30 x 20 = 22,611.19018 km.

Length of the Earth's equator = 40,077.27418 km:

40,077.27418 : 22,611.19018 = 1.772453102 km = **AB** (*Figure 24*):

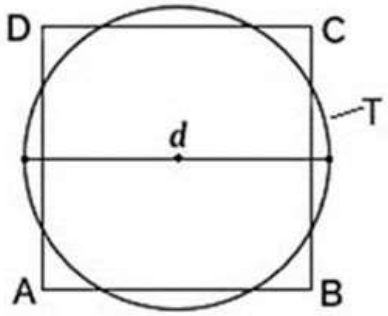

Figure 24.

• area of the Square **ABCDA** = **3.14159** km² = area of the Circle **T**.

• **d** = 2 km,

• circumference of the Circle = 6.28318 km = **2 Pi**

What are the numbers of measures of Solomon's temple? Let's see:

120 x 60 x 30 x 20 = **4,320,000**

• 1 day = **24** hours,

• 1 hour = **60** minutes,

• 1 minute = **60** seconds

4,320,000 : 24 : 60 : 60 = **50 days**

Solomon's temple numbers are seconds in 50 days:

"Even unto the morrow after the seventh sabbath shall ye number fifty days; and ye shall offer a new meat offering unto the LORD." (*Leviticus, 23:16*)

"And when the day of Pentecost was fully come, they were all with one accord in one place." (*Acts, 2:1*)

One side of the Pyramid's base = 9131.05 inches = 231.92867 meters. Perimeter of the Square of the Pyramid's base = 927.71468 meters (m).

• The length of the Earth's equator = 40,077.27418 km = 40,077,274.18 m:

40,077,274.18 : 927.71468 = 43,200 seconds = 720 minutes = 12 hours.

This means: if something were to move at a speed of 927.71468 m/s, it would travel 40,077.27418 km in 12 hours.

• Length of Earth's equatorial diameter = 12.757.00336 km = 12,757,003.36 meters:

12,757,003.36 : 43,200 = 295.3010037 meters,

295.3010037 : 2 = 147.6505028 meters = 5813.011883 inches = height of the Great Pyramid.

• **The number Phi** (φ, Φ, ϕ) = 1.618033988

5813.011885 x 1.618033988 = 9405.650803 inches:

9405.650803 : 5 = 1881.130161 inches = length of the Grand Gallery.

Conclusion: The Great Pyramid and Solomon's Temple indicate the dimensions of the Earth with measures of ***length***, ***speed*** and ***length of time***:

length x *speed* x *time* = *measures of the Earth*.

THE ANGLE OF THE PYRAMID'S ENTRANCE PASSAGE

At the time of the construction and completion of the Great Pyramid around 3400-3200 BC, the pole star was the star Alpha Draconis, also known as Tuban, a star in the Dragon constellation. Then the Earth's axis was in the direction of Tuban, as it is today in the direction of Polaris.

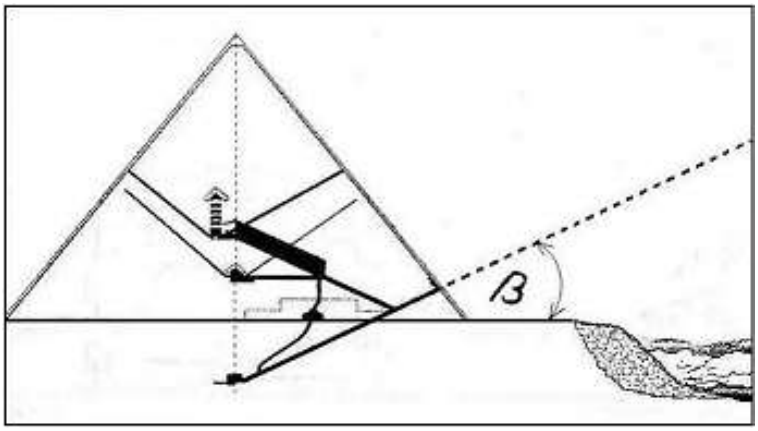

Figure 25. *Angle of the Pyramid's Entrance passage (β): 26.30268975°.*

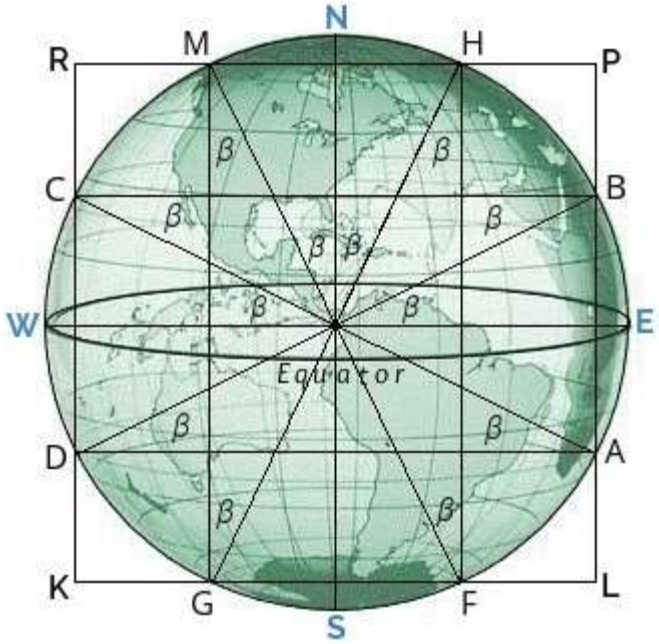

Figure 26. *The angle of the Pyramid's Entrance passage (β = = 26.30268975°) projected onto the cross-section of the Earth.*

Measures of the Earth:

- **β** = 26.30268975°
- **sin β** = 0.443113275

• **tan β** = 0.494289196

• **WE** = 12,757.00336 km = Earth's equatorial diameter = **AC** = **BD** = **GH** = *FM*;

a) 12,757.00336 x 0.443113275 = 5652.797538 km = **AB** = **CD** = **GF** = **HM**

b) 2 x 5652.797538 = 11,305.59508 km = **KL** = **LP** = **PR** = **RK**

• area of the Square **KLPPRK** = 127,816,480 km² = area of the Circle of the Earth's cross-section (*Fig. 26, 27*),

• diameter of the circle of the Earth's section = 12,757.00334 km = **EW**.

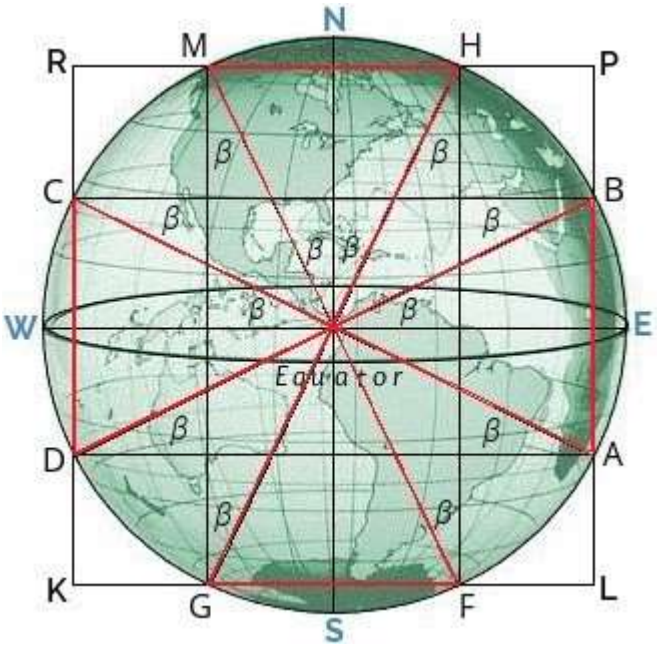

Figure 27. *The cross is composed of four triangular solar symbols.*

Solomon's Temple numbers (in sacred cubits): 120 (height of the portal), 60 (length of the temple), 30 (height of the temple), 20 (width of the temple):

• **KL** = 11,305.59508 km = 1,130,559,508 cm = 445,102,168.5 inches:

• 445,102,168.5 : 120 = 3,709,184.738 inches,

• 3,709,184.738 : 60 = 61,819.74563 inches,

• 61,819.74563 : 30 = 2060.658188 inches,

• 2060.658188 : 20 = 103.0329094 inches = ½ of the width of the King's Chamber.

THE ANGLE OF THE PYRAMID'S ENTRANCE PASSAGE AND TIME

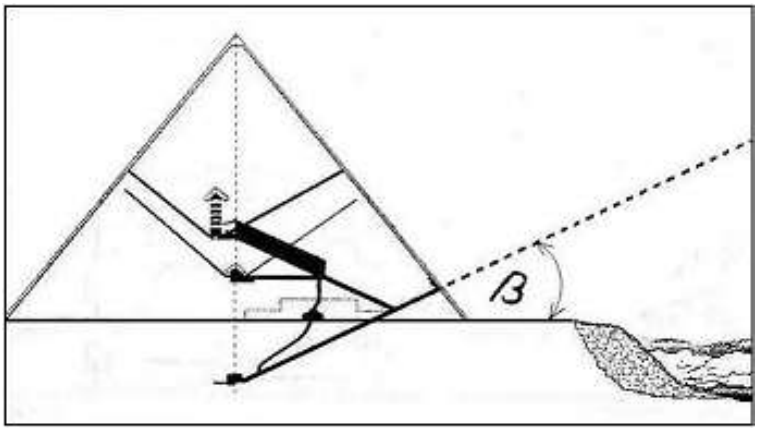

Figure 28. *Angle of the Pyramid's Entrance passage (β): 26.30268975°.*

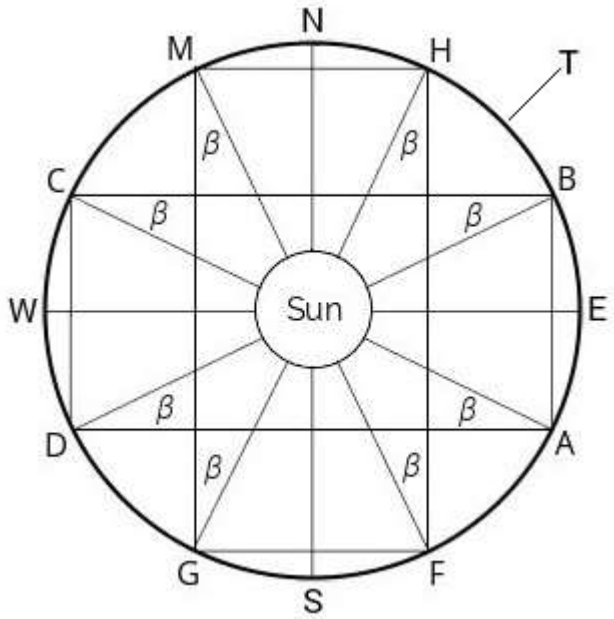

Figure 29. *Geometry of one year (β = 26.30268975°).*

• **β** = 26.30268975° = the angle of the Pyramid Entrance passage (*Fig. 29*),

• **sin β** = 0.443113275

• **tan β** = 0.494289196

• volume of the circle of the year (**T**) = 365.242 days = 1 year:

a) d = 116.2602377 units (days) = **EW** = **NS**

b) 116.2602377 x 0.443113275 = 51.51645468 days = **AB** = **CD** = **GF** = = **HM**;

c) 51.51645468 x 4 = 206.0658187 days (the width of the King's Chamber in inches).

Figure 30. *Sun cross (stone relief, Nimrud, Assyria, 9th cenury BC).*

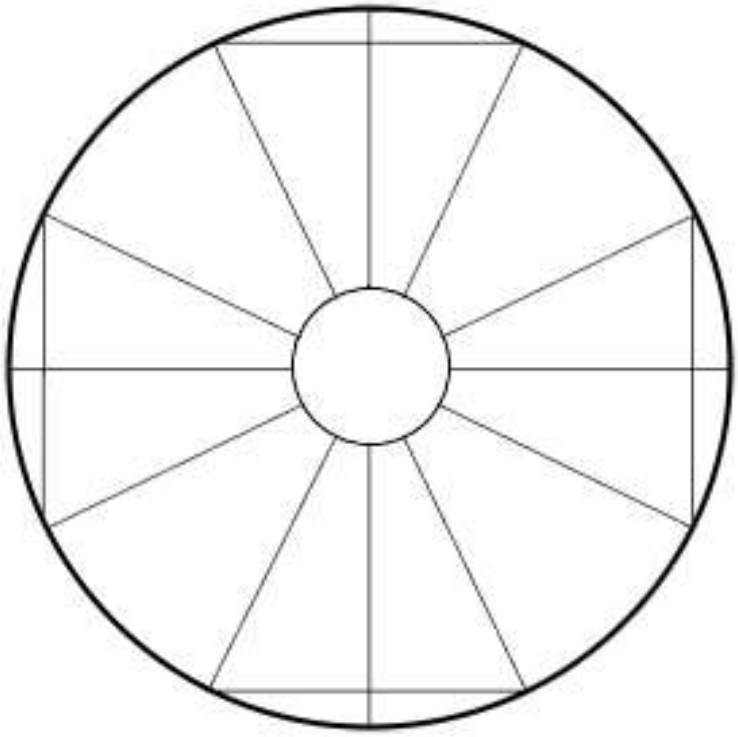

Figure 31. *Sun cross according to the geometry of the direction of the Entrance passage of the Pyramid.*

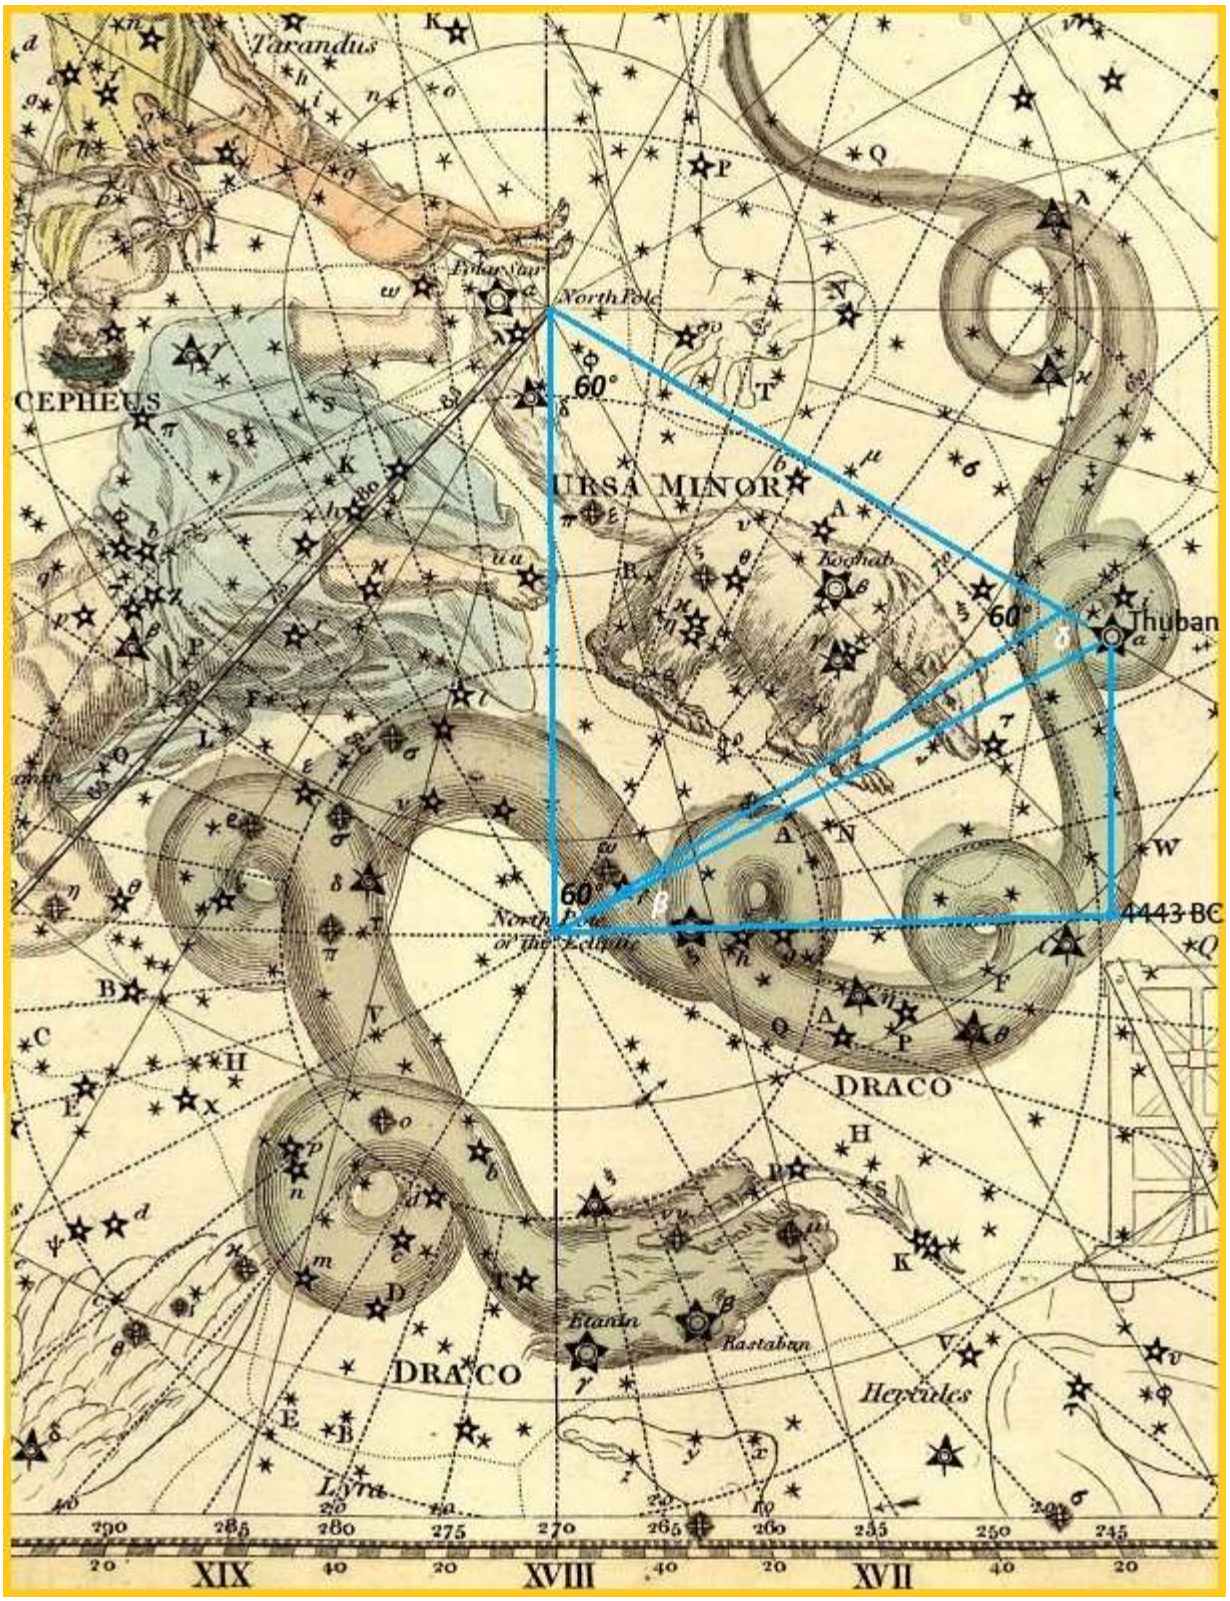

Figure 32. *From the North Pole of the Ecliptic the direction towards the star Thuban goes at an angle of 26.30268975° (angle β).*

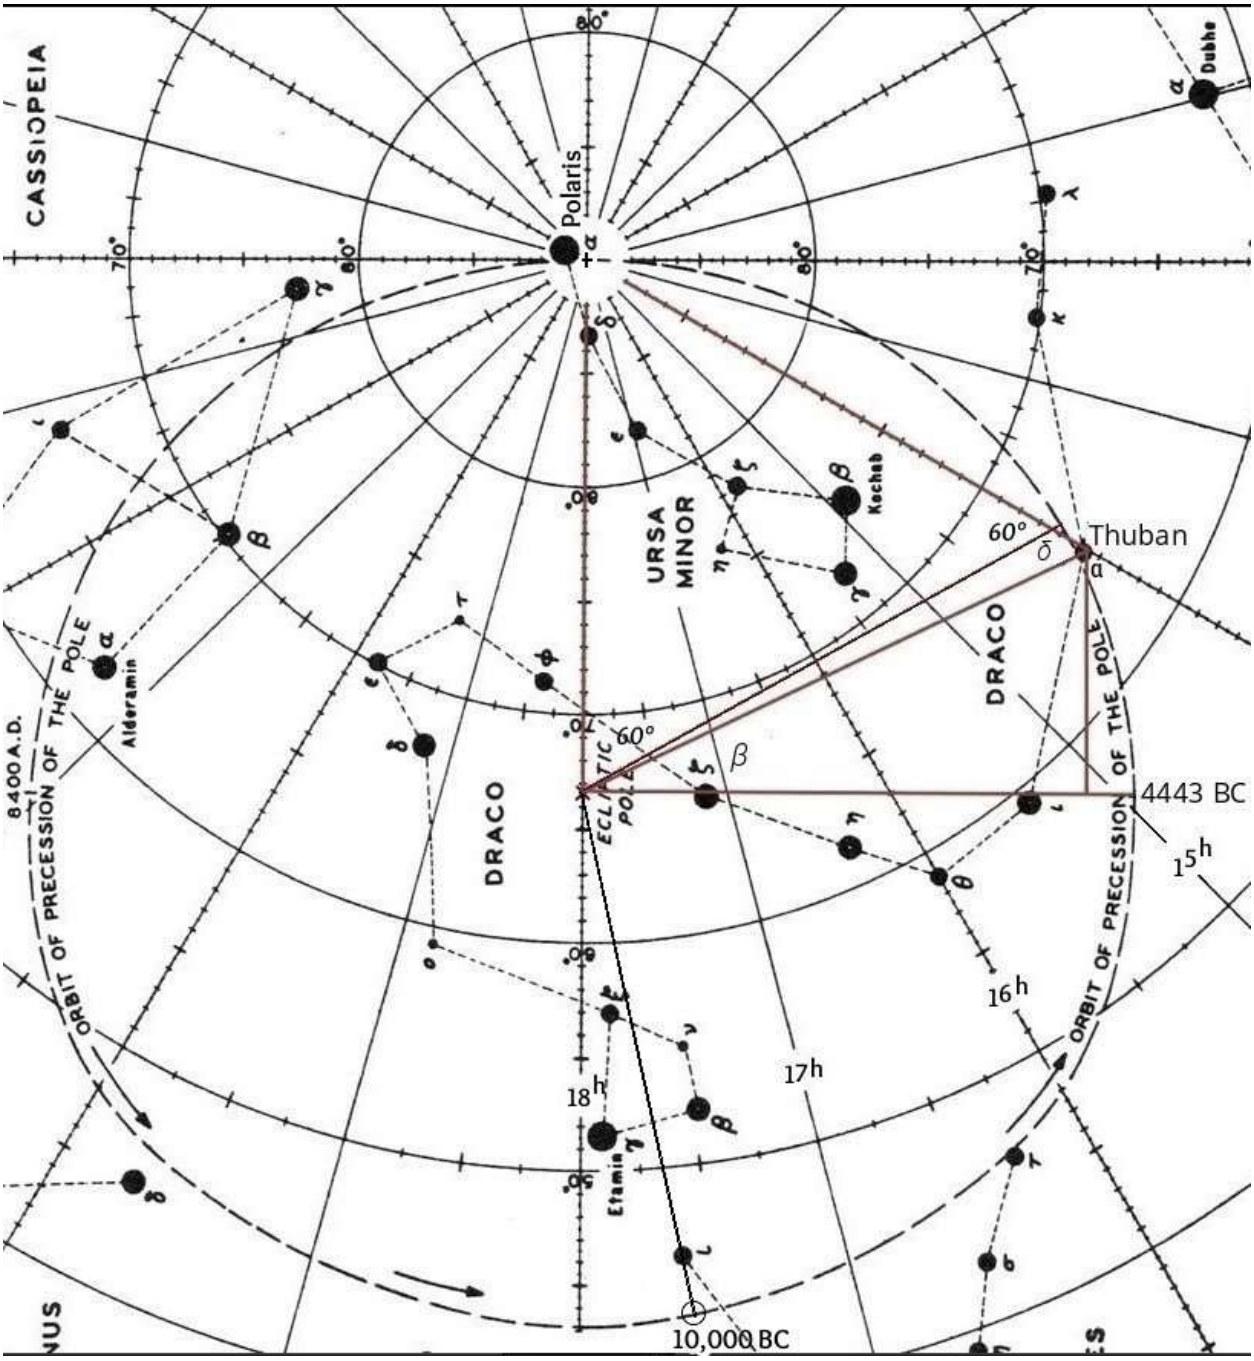

Figure 33. *Dragon (Draco) in its lowest position above the horizon (angle β = 26.30268975° = angle of the the Entrance passage of the Pyramid).*

When, during its 24-hour rotation around the center of the Ecliptic pole, Draco reaches its lowest position above the northern horizon, then the sky shows the position of the stars as shown on the map above (*Figure 32, 33*). At that time, from the center of the Ecliptic pole, the angle towards the star Thuban (angle β) is equal to the angle of the Pyramid entrance passage:

26.30268975° (3.69731025° below 30°, angle δ). The horizontal line of this angle shows on the circle of the Ecliptic the point of the Earth's north celestial pole 4443 BC when the Vernal equinox from Gemini entered the sign of Taurus. Our world was created 10,000 before the Christian era. From the beginning of the Creation to 4443 BC passed 5557 years, and during that time with a general annual precession of 0.013970786° (50.2948296 arc-seconds) the Earth's axis has traveled 77.6356578° to the position in 4443 BC. In order for the Earth's axis to cross the next 26.30268975° (the angle of the Pyramid's entrance passage) 1882.692194 years had to pass. That is a total of 103.9383476° or 7439.878989 years from the beginning of the creation of our world, i.e. 2560.307806 years BC (2561st BC).

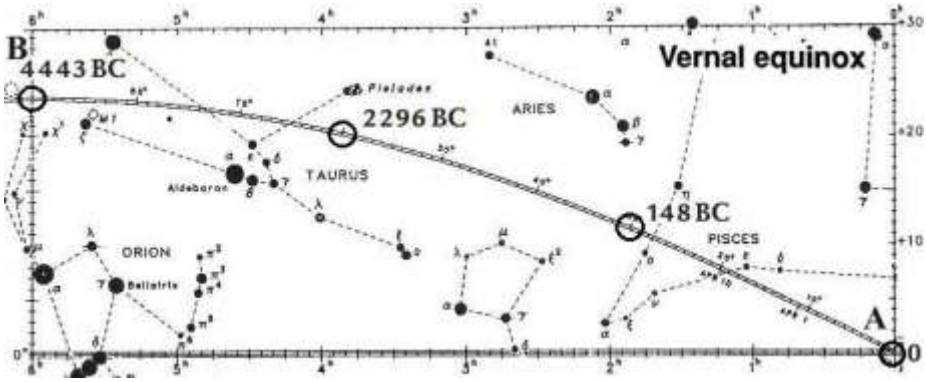

Figure 34. *On the spring equinox (Vernal equinox) of 4443, the Sun entered Taurus from Gemini.*

The first to describe the transition of the Sun from the sign of Aries to the sign of Pisces on the Vernal equinox was the Greek Hipparchus of Nicaea around 150 BC. According to Albert Pike, the Sun entered the sign of Pisces on the spring equinox from Aries around 300 AD [1] and according to Pike from the sign of Pisces it entered the sign of Aquarius around 1872 [2]. According to the astronomy of the Great Pyramid, the Sun entered the sign of Pisces in the middle of the 148th BC, and from Pisces in Aquarius entered on the spring equinox 2013 AD. Ancient astronomers took a full 72 years for 1° of displacement of the Earth's axis on the Ecliptic circle, or 2160 years for the Vernal equinox to pass from one to the next zodiac sign. This means that according to these measures of 4443 BC, the Vernal equinox, after passing through the signs of Taurus, Aries and Pisces, will enter the Aquarius in 2037 AD (according to the Pyramid, the end of our world is between 2035--2070).

PYRAMID'S RECORDS IN THE SKAY

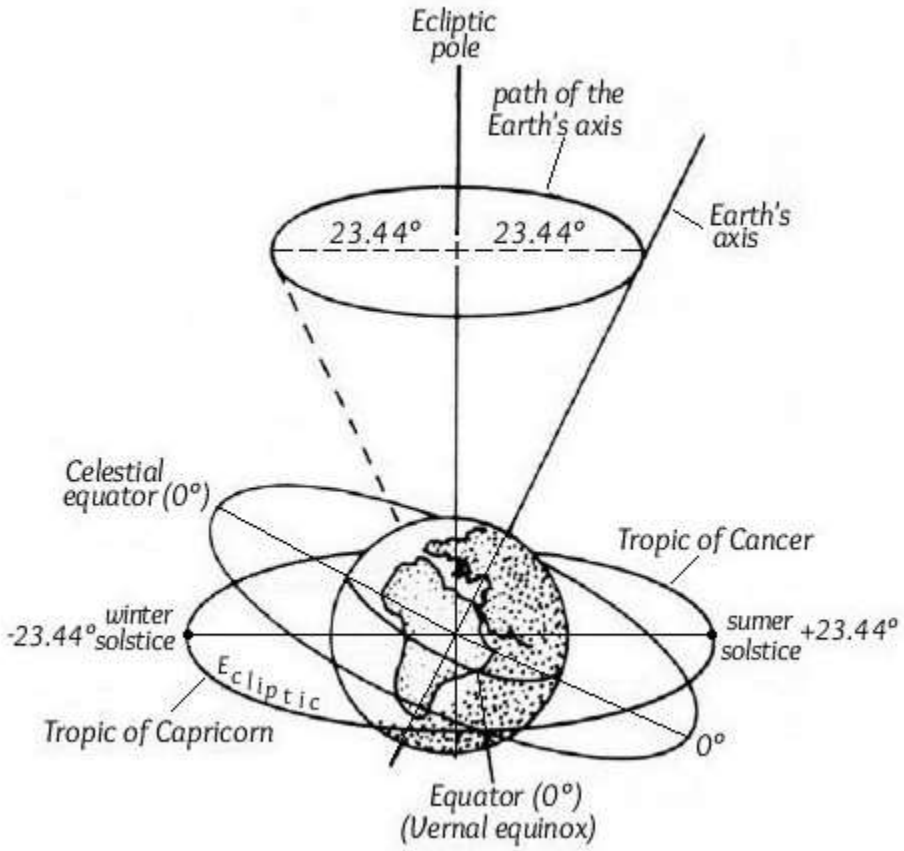

Figure 35. *Rotation, motion and general precession of the Earth.*

In relation to the Earth's and celestial equator, the line of the northern tropic (Tropic of Cancer) is at +23.44° north, and the line of the southern tropic (Tropic of Capricorn) is at an angle of -23.44°. These are the maximum angles of the Sun's annual path, i.e. the Sun's ecliptic (close to 23.5°), the highest point of the Sun's ascent above the equator in the northern sky at the time of the change of spring and summer (summer solstice: +23.44° N) and the lowest point of the Sun below the equator in the southern sky during the transition of autumn and winter (winter solstice: -23.5 S; *Figure 35*). Due to the general precession of the Earth, the Earth's axis describes a circle 23.44° away from the center of the North ecliptic pole, which is located in the constellation Draco (*Figure 36*).

Here we will show how the architect of the Great Pyramid calculated, drew in the architectural plan and incorporated some of these measures into the building of the Pyramid for our understanding of important past, present and very near future events. First we start with the numbers of the Pyramid related to the measurements of the Earth.

Figure 36. *This map shows Earth's North Celestial Pole 1690 (Johannes Hevelius, Uranographia, 1687). At the point 4443 BC was the Earth's North Celestial Pole. From 4443 BC (point **0**) to 1690 is 6133 years. According to the annual general precession of 0.013970786 degrees, from 4443 BC to 1690, the Earth's axis around the ecliptic circle moved about 85.682 degrees, and the Earth's North Celestial Pole was near the star Polaris.*

Figure 37. *At the time of the construction and completion of the Great Pyramid around 3400-3200 BC, the pole star was Thuban. The angle of the Entrance passage of the Pyramid (β) shows 26.30268975º in the direction of the star Thuban. It takes 1882.692194 years for such a displacement of the Earth's axis.*

The time from the beginning of the creation of our world to Noah's flood is encoded in the length of the base of the Great Pyramid: **AF** = 7374.882 years. That's the 2626th BC (*Figure 38*). The time of 4695 years since Noah's flood is encoded in the height of the Pyramid (the highest point of the top of the Pyramid shows 2070 AD). All this was recorded in the measurements of the Pyramid and plotted in the astronomical map over the angle of the Pyramid's Entrance passage towards the star Tuban.

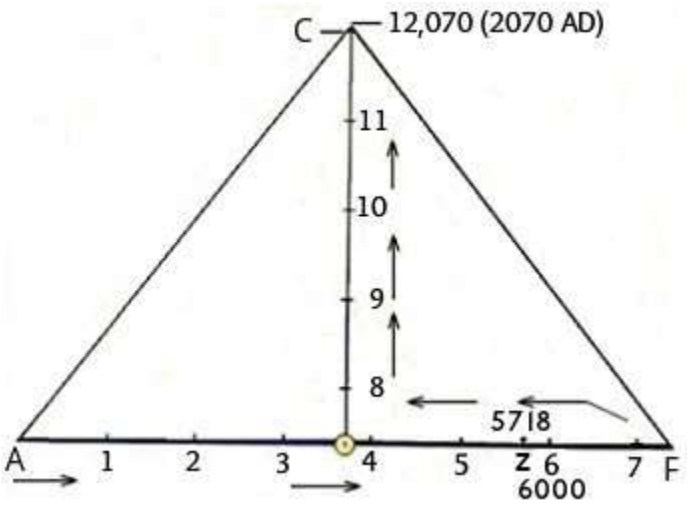

Figure 38. *The Time Pyramid of humanity.*

According to the general annual precesion of 0.013970786°, from the beginning of our world 10,000 BC to 4443 BC, 5557 years passed, and during that time the Earth's axis moved 77. 6356578° through the Ecliptic circle to the point 4443 years (*Figure 37, 38*). For the Earth's axis to cross the next 26.30268975º, it took 1882.692194 years, which is 7439.692194 years from the beginning of our world, i.e. 2560.307806 BC (2561st BC). From that time until the end of 2000 AD, when 12,000 years have passed since the beginning of our world, is 4560.307806 years and 63.71108445° have passed since the Earth's axis moved towards the star Polaris. That is 90.0137742° away from the position it was in 4443 BC.

And now we follow the measures and numbers: the number of the length of the King's chamber in the Pyramid is 412.13163 (inches):

• 412.1316378 : 3.14159 = 131.1856855

• 131.1856855 : 2 = 65.59284276 = radius of a circle whose diameter is equal to the length of the King's Chamber.

In order for the Earth's axis to move 65.59284276° on the Ecliptic circle, it takes 4695 years from Noah's flood to 2070 AD (the length from the Thuban to the Polaris).

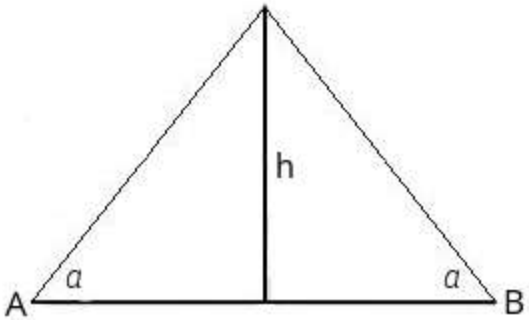

Figure 39.

So, with a general precession of 0.013970786º, in 4695 years from Noah's flood to the end of our world, the Earth's axis along the Celestial ecliptic circle will move 65.59284276° (height **h**, *Figure 39*). And behold:

• **h** = 65.59284276°

• **α** = 51.85399754° = angle of ascent of the Great Pyramid;

• **tan α** = 1.273240621

• **AB** = 103.0329094° (see the width of the King's Chamber in the picture below, *Figure 40*).

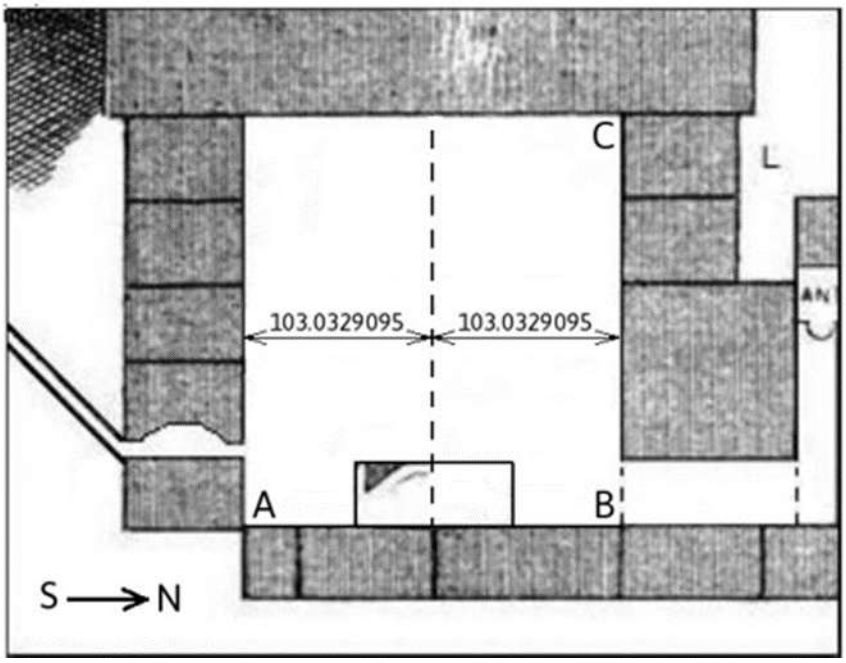

Figure 40. *The width of the King's Chamber is 2 x 103.0329095.*

The length of **AB** is 103.0329094° (*Figure 41*). With an annual precession of 0.013970786° for a displacement of 103.0329094° the Earth's axis required 7374.882802 years and that is the years from the Creation to Noah's flood, i.e. from the point 10,000 BC to the star Tuban (*Figure 37*).

And now we return to the beginning of this topic and to the parallels of the northern and southern tropics, the Tropic of Cancer and Tropic of Capricorn, the lines that surround the Earth at 23.44° north and as much south of the Earth's equator (*Figure 41*), so let's go to the meaning of Figures 41, 42.

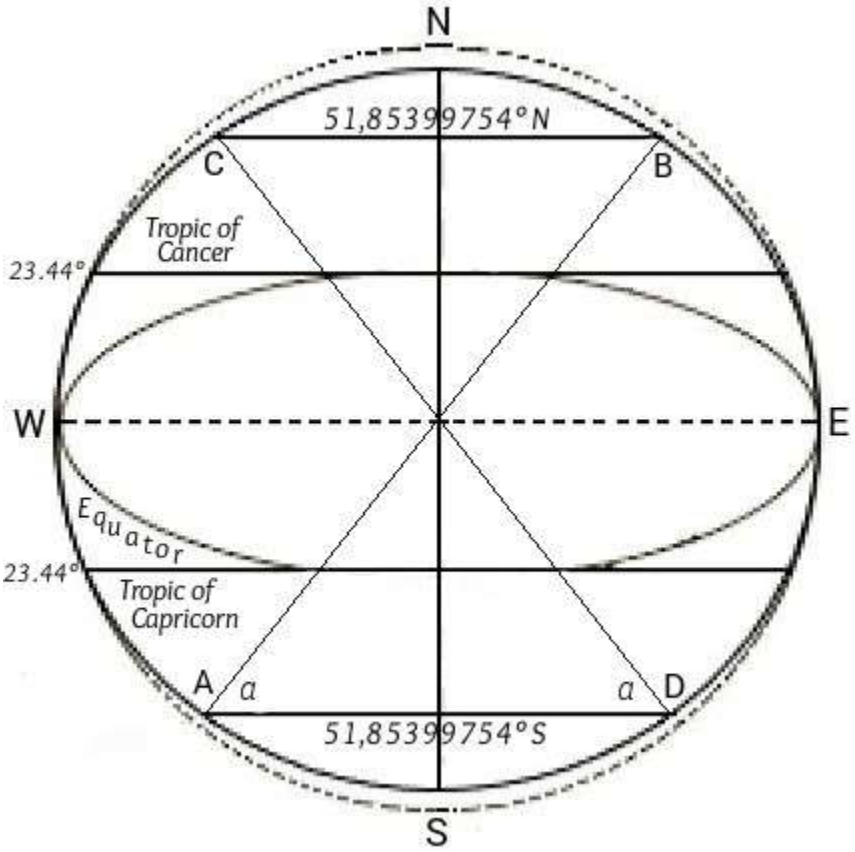

Figure 41. *Earth, seasons and measurements of the Pyramid.*

• **EW** (East - West) = Earth's equatorial diameter = 12,757.00336 km: the equatorial circle is 40,077.27418 km:

• **α** = 51.85399754° = angle of ascent of the Great Pyramid,

• **sin α** = 0.786439353

• **tan α** = 1.273240621

• **AB** = **CD** = 12,732.40621 km = diagonal diameter of the Earth between latitude 51.85399754° N - 51.85399754° S. The numbers of this diameter are the same as the tangent numbers of the Pyramid's angle of ascent (*angle α*, *Figure 42*). The circle of the Earth around the mentioned diameter is 40,000 km long, and 1° of this circle gives 111.1111111 km, 1 minute of this circle is 1.851851852 km (at the Equator it is 1.85542936 km):

360° x 111.1111111 km = 40,000 km.

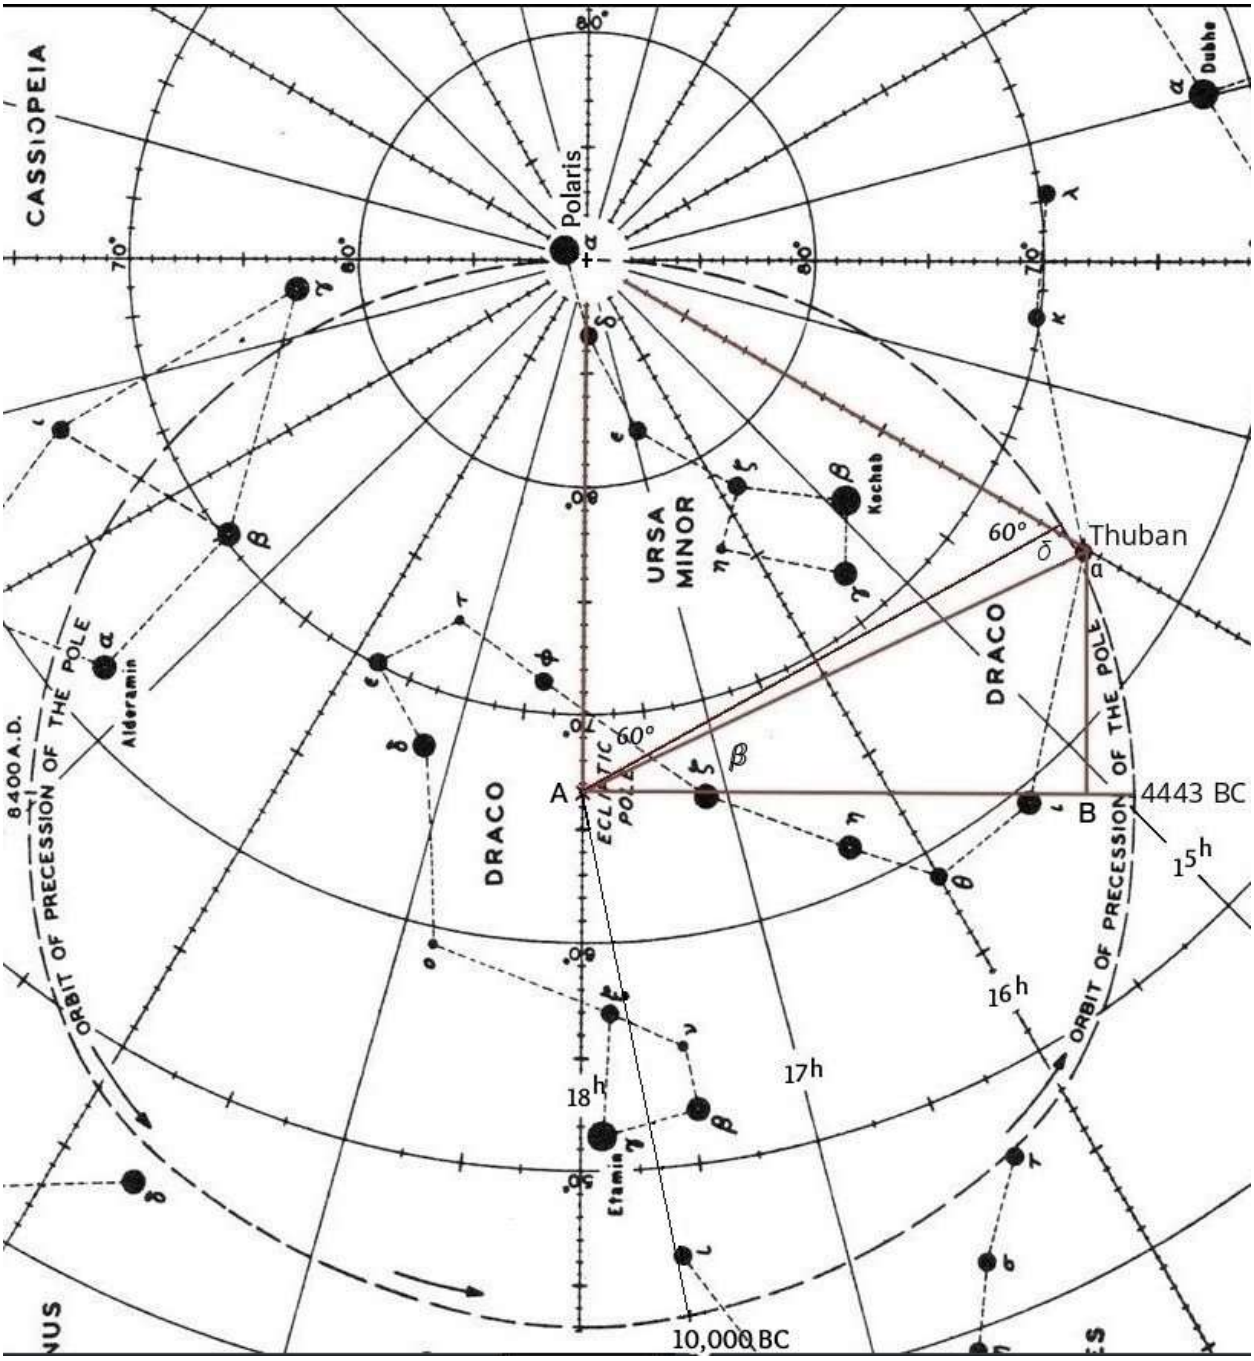

Figure 42. *At the time of the creation of our world 1000 BC, the Earth's North Pole was at the point 10,000 BC (the point slightly to the right in the bottom middle of the map). The flood was in the year 7375th from the beginning of our world (4695 BC), and the Earth's North Ecliptic Pole at that time was at the star Thuban. All this marks the angle of the Entrance Passage to the Great Pyramid: = 26.30268975° = angle β.*

- **β** *= 26,30268975°*

• **sin β** = 0.443113275
• **tan β** = 0.494289196
• Pyramid's angle of ascent = 51.85399754°
• tan 51.85399754° = 1.273240621
• diagonal Earth's diameter between 51.85399754° N - 51.85399754° S = = 12,732.40621 km,
• circumference of the Earth between 51.85399754° N - 51.85399754° S = = 40,000 km;
• 1° of the Earth's circle between 51.85399754° N - 51.85399754° S = = 111.1111111 km;
• exterior cubic size of the coffer in the King's chamber = 2335.225124 liters,
• number of the length AB = 2335.225124
• number of the length B-Thuban = 1154.276551
• number of the length A-Thuban = 2604.92433

2604.92433 : 111.1111111 = 23.44431897

The number 23.44431897° = the angle of the Sun's ecliptic and the largest angle of the Earth's axis to the center of the North celestial ecliptic pole in the constellation Draco (point A*, Figure 42*).

So, there is no excuse, no escape, no matter how economically and politically powerful a person is in this transient world: according to the Pyramid, the end of our world is between 2035-2070. In the time of today's overly rich, but crazy people who think of impiety, lies and evil to transform man into a biorobot and to create a Nazi-communist New World Order, their great impious evil will crash on their own heads.

NUMBER Phi, GRAND GALLERY, SOLOMON'S TEMPLE AND EARTH

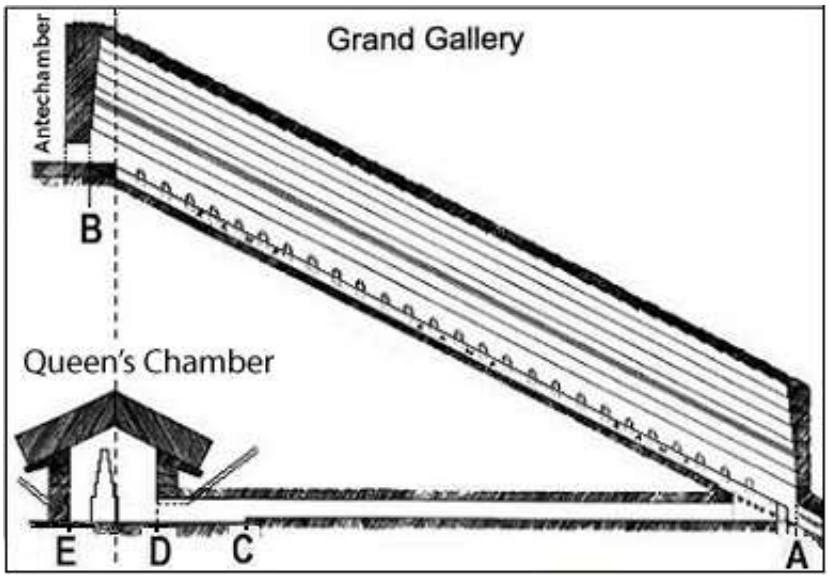

Figure 43. *The Grand Gallery above the Queen's chamber.*

1. The number Fi (phi, φ) = 1.618033988..., and the length of the floor--line of the Great Gallery (AB) = 1881.130161 inches = 47.78070609 meters (*Figure 43*):

1881.130161 : 10 = 188.1130161 inches = 4.778070609 m.

Solomon's temple numbers (in sacred cubits): 120 (height of the portal), 60 (length of the temple), 30 (height of the temple), 20 (width of the temple):

• 4.778070609 x 120 x 60 x 30 x 20 = 20,641,265.03 m = 20,641.26503 km,

• 20,641.26503 : 1.618033988 = 12,757.00337 km = the length of the Earth's equatorial diameter.

2. The length of the floor-line of the Grand Gallery (**AB**) = 1881.130161 inches:

• 1881.130161 x 5 = 9405.650805 inches = 238.9035304 meters:

• 238.9035304 : 1.618033988 = 147.6505059 m = height of the Pyramid.

3. The length of the base side of the Pyramid = 9131.05 inches:

• 9131.05 : 1881.130161 = 4.854023496 inches

• 4.854023496 x 1.618033988 = 7.853974995 = 2.5 x 3.14159

• 4.854023496 : 1.618033988 = 3

THE VEDAS ABOUT THE END OF OUR WORLD

In the Vedic time cycles, the duration and end of this world of ours is coded. Here we will explain the codes and the meaning of those cycles!

The great cycle of time is called Mahayuga (Sanskrit: Mahā-yuga), and the smaller cycles are divided into four groups called Chaturyuga (Sanskrit: *Caturyuga*).

Chataryuga (four smaller cycles):

1. Satya Yuga/Krita Yuga
2. Treta Yuga
3. Dwapara Yuga
4. Kali Yuga

There is also a subgroup called **Deva vatsara** (Sanskrit: *deva vatsara*). It is a cycle of 360 human years:

a) deva = divine, heavenly, shining heavenly [1]
b) vatsara = every 5h year in a 5-year cycle [2]

Thus, it becomes clear to us what the meaning of the expression *"divine year"* is and what is *"human year"*: "divine year" is the true natural meaning of the meaning for the initiated, instructed clergy, and under the expression "human year" is the number that is written for ordinary people, for laymen. And here is the real meaning:

360 : 5 = 72 years

What are these 72 years? Due to an astronomical event known as the precession of the equinoxes, in 72 years the Sun moves 1° relative to the surroundding stars of the zodiac circle (this is an ancient esoteric constant). Also, in so many years, the direction of the Earth's axis moves 1° in the circle descrybed by the rotation of the Earth's axis around the northern celestial pole.

Maha Yuga (Great Cycle): 4,320,000 human years.

a) mahā = great, powerful, bright [3]
b) yuga = vatsara = 5th year in a 5-year cycle [4]

When we divide the years of Maghayuga or the Great Cycle by the

so-called 360 human years, what do we get? Let's look:

4,320,000 : 360 = 12,000 years

So, in the number of 4,320,000 "human years", human years are again divided by 360 "human years" as the key to the true meaning, which is a total of 12,000 years of true natural solar years on Earth. According to the Great Pyramid, this is the time from the creation of our world to the end of the year 2000 AD. The Mayan calendar counted time until the year 2012, and that is where the Mayan baktun (time) completed, ended.

All those interpretations of Sumerian and Vedic years according to some kind of “big cycles of 4,320,000 years” are exoteric, layman's interpretations and are big delusion and deception of the common people, because in that number there are only 12,000 natural or divine, i.e. solar years. Let's not forget: God is clothed in the Sun, and when we say "divine" we mean the real natural years of the Sun.

1. Satya Yuga (Krita Yuga) = 1,728,000 human years:

1 728 000 : 360 = 4800 years from the beginning of the creation of our world to 5200 years old era.

2. Treta Yuga = 1,296,000 human years. Sanskrit *treta* is *triad*, *trinity*, *three holy fires* [5]:

1,296,000 : 360 = 3,600 years = 3 x 1,200 years = 50 cycles of 72 years each.

3. Dvapara Yuga = 864,000 human years:

864,000 : 360 = 2400 years = 2 pairs of 1200 years.

4. Kali Yuga = 432,000 human years. According to the Vedic scriptures, at the end of the cycle of this yuga, there will be a black (Sanskrit: *kali*) fiery time of the worst angry people, a time of discord and strife, a time of substitutes, a time of death and the world will be destroyed [6]:

432,000 : 360 = 1200 years

It is the cycle of black time, the time of the Dark Ages: the time of the last Ecumenical Councils, the time of feudalism, the time of the extermination of

the followers of the Sun, the time of the Crusades, the extermination of "heretics", the time of the Inquisition, the time of the discovery of new continents, the time of the public activity of Freemasons, the time of revolutions, the time of colonialism, the time of the creation of America, the time of the First and Second World Wars, and the Third is already ongoing since 2020. action - sona, the time of revolutions, the time of imperialism and slaveowning colonialism, the time of the creation of the United States of America, the time of the First and Second World Wars, and the Third is already ongoing since 2020.

Conclusion

Deva vatsara is listed first as the key to the meaning of the Vedic cycles, followed by **Maha Yuga** with its 12,000 years as the sum of the remaining cycles:

A. Satya Yuga = 1,728,000 human years = 4800 years
B. Third of the South = 1,296,000 human years = 3600 years
C. Dvapara Yuga = 864,000 human years = 2400 years
D. Kali Yuga = 432,000 human years = 1200 years

Total divine (true solar) years: **A** + **B** + **C** + **D** = 4800 + 3600 + 2400 + 1200 = 12,000 years from the beginning of the creation of our world to 2000 years of the Christian era (our world is already in the phase of extinction).

We said that the Earth's axis moves 1° in 72 years in its circle around the center of the Northern celestial pole, and for the axis to describe a full circle it takes about 25,920 years or 360 shifts (degrees) every 72 years. Now we share the full cycle of precession of the equinoxes of 25,920 years with the cycles of human years listed above:

• 25,920 : 1,728,000 = 0.015 years = 5.47863 days of the solar year,
• 25,920 : 1,296,000 = 0.02 years = 7.30484 days,
• 25,920 : 864,000 = 0.3 years = 10.95726 days,
• 25,920 : 432,000 = 0.06 years = 21.91452 days

…….
Total: 45.65525 days

a) 45.65525 x 2 = 91.3105 days of a sunny (tropical) year = 1 season,

b) 91.3105 x 4 = 365.256 days = 1 solar (tropical) year.

And finally about the time of the precession circle of about 25,920 years and the Maha Yuga or the Mighty Yuga with its 4,320,000 "human years":

25,920 : 4,320,000 = 0.006 years = 2.191452 days and these days are for checking the truth of everything said:

a) first and initial integer = 1
b) number Fi (φ) = 1.618033988...
c) number Pi = 3.141592654...

2.191452 x 1.618033988 = 3.545843819 days = perimeter of Square **ABCDA** (*Figure 44*).

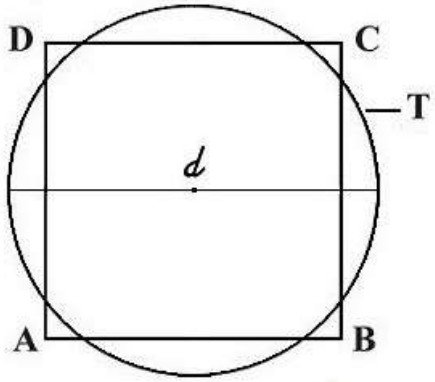

Figure 44.

The perimeter of the square **ABCDA** = 3.545843819 units of measurement, and each side of the square is 0.886460954 units. The area of the Square is 0.785813024 square units. The Circle **T** has the same area and its diameter (**d**) is 1.000264496 units (*Figure 44*). The circumference of the Circle **T** is 3.142423593 units = **Pi**. So here we have three very specific numbers in mathematics: the number **1**, the number **Phi** and the number **Pi** and the result of geometry correct to two decimal. Why is the result not correct to more than one decimal? Because the number 25,920 is not 100% correct, it is the nearest correct number (different authors have different claims).

THE PYRAMID OF TIME

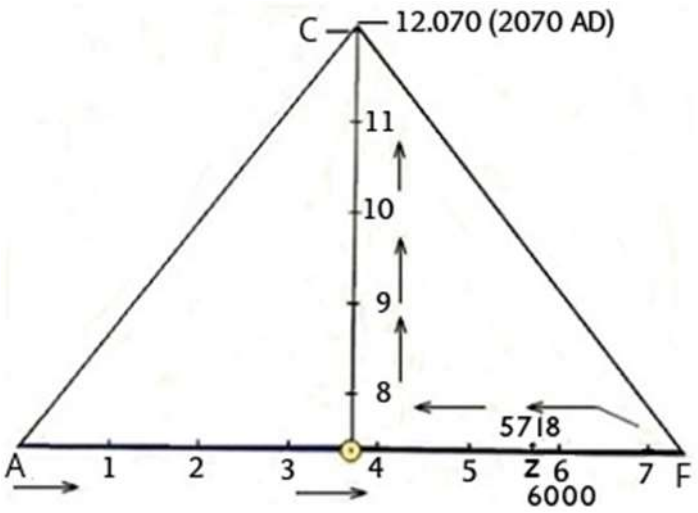

Figure 45. *The Great Pyramid and the total time of the Earth.*

The height of the Great Pyramid shows the time from the Biblical Flood to the to the time of the transformation of this world:

• **8** = 8000 years from the beginning of the Creation,

• **9** = 9000 years,

• **10** = 10,000 years = the time from the beginning of the Creation to the Christian era,

• **11** = 11,000 years,

• **12** = 12,070 years = 2070 AD,

• **AF** = 7374,882 years (from the beginning of the Creation to the Noah's flood),

• **FE** (vertical distance) = **4695** years,

• **AFE** = 7344.882 + 4695 = **12,069.882** years = **2070 AD**.

The Great Pyramid is a geometric model of the Earth, time and the duration of its time from its creation to the transformation of our world (the end): a total of 12,069.88 years since Creation = 2070 AD.
